

# Package ‘bndesr’

April 3, 2023

**Title** Access Data from the Brazilian Development Bank (BNDES)

**Version** 1.0.2

**Description** Allows access to data on BNDES disbursements and contracts since 1995. The package makes it easy to import data from the bank into R.<[https://www.bndes.gov.br/SiteBNDES/bndes/bndes\\_en](https://www.bndes.gov.br/SiteBNDES/bndes/bndes_en)>.

**License** MIT + file LICENSE

**Encoding** UTF-8

**RoxygenNote** 7.2.1

**Imports** curl, dplyr, janitor, lubridate, RCurl, readr, readxl, stringr

**Suggests** testthat (>= 3.0.0)

**Config/testthat/edition** 3

**NeedsCompilation** no

**Author** Igor Laltuf [aut, cre] (<<https://orcid.org/0000-0002-5614-4404>>)

**Maintainer** Igor Laltuf <igorlaltuf@gmail.com>

**Repository** CRAN

**Date/Publication** 2023-04-03 00:20:13 UTC

query_desimbursements . . . . .	3

<b>Index</b>	<b>5</b>
--------------	----------

query\_bndespar\_desimbursements

*Queries BNDESPar desimbursements data*

---

**Description**

Downloads data from BNDESPar desimbursements since 2007 and return it in the form of a dataframe.

**Usage**

```
query_bndespar_desimbursements(year = "all")
```

**Arguments**

year                    selects the years which data will be downloaded. integer.

**Value**

a dataframe with the data

**Examples**

```
df <- query_bndespar_desimbursements()
```

---

query\_bndespar\_portfolio

*Queries BNDESPar portfolio data*

---

**Description**

Downloads data from the portfolio since 2006 and return it in the form of a dataframe.

**Usage**

```
query_bndespar_portfolio(year = "all")
```

**Arguments**

year                    selects the years which data will be downloaded. integer.

**Value**

a dataframe with the data

**Examples**

```
df <- query_bndespar_portfolio()
```

---

query_contracts	<i>Query the data of the loan contracts made through the National Bank for Economic and Social Development (BNDES).</i>
-----------------	---

---

**Description**

Downloads contracts data for the selected years, since 2002, and return it in the form of a dataframe.  
Note: to access the total amount disbursed, use the function `query_desimbursements_data()`.

**Usage**

```
query_contracts(year = "all")
```

**Arguments**

year                    selects the years which data will be downloaded. integer.

**Value**

a dataframe with data for the selected year.

**Examples**

```
## Not run: query_contracts(year = 2012)
```

---

query_desimbursements	<i>Query data on loan disbursements made through the National Bank for Economic and Social Development (BNDES).</i>
-----------------------	---

---

**Description**

Downloads the data on loan disbursements for the selected years, since 1995, and return it in the form of a dataframe.

**Usage**

```
query_desimbursements(year = "all")
```

**Arguments**

year                    selects the years which data will be downloaded. integer.

**Value**

a dataframe with data for the selected year.

**Examples**

```
## Not run: query_desimbursements(year = c(1999:2010))
```
