

Package ‘nodbi’

June 12, 2022

Title 'NoSQL' Database Connector

Description Simplified document database access and manipulation, providing a common API across supported 'NoSQL' databases 'Elasticsearch', 'CouchDB', 'MongoDB' as well as 'SQLite/JSON1' and 'PostgreSQL'.

Version 0.8.0

nodbi-package	<i>Document database connector</i>
---------------	------------------------------------

Description

Simplified document database access and manipulation, providing a common API across supported 'NoSQL' databases 'Elasticsearch', 'CouchDB', 'MongoDB' as well as 'SQLite/JSON1' and 'PostgreSQL'.

Author(s)

Scott Chamberlain <sckott@protonmail.com>

Rich FitzJohn <rich.fitzjohn@gmail.com>

Jeroen Ooms <jeroen.ooms@stat.ucla.edu>

Ralf Herold <ralf.herold@mailbox.org>

contacts	<i>contacts JSON data set</i>
----------	-------------------------------

Description

contacts JSON data set

Usage

contacts

Format

A JSON string with ragged, nested contact details

diamonds	<i>diamonds data set</i>
----------	--------------------------

Description

diamonds data set

Format

A data frame with 53940 rows and 10 variables:

- price price in US dollars (326-18,823 USD)
- carat weight of the diamond (0.2-5.01)
- cut quality of the cut (Fair, Good, Very Good, Premium, Ideal)
- color diamond colour, from J (worst) to D (best)
- clarity a measurement of how clear the diamond is (I1 (worst), SI1, SI2, VS1, VS2, VVS1, VVS2, IF (best))
- x length in mm (0-10.74)
- y width in mm (0-58.9)
- z depth in mm (0-31.8)
- depth total depth percentage = $z / \text{mean}(x, y) = 2 * z / (x + y)$ (43-79)
- table width of top of diamond relative to widest point (43-95)

docdb_create *Create documents in a database*

Description

A message is emitted if the container key already exists.

Usage

```
docdb_create(src, key, value, ...)
```

Arguments

src	Source object, result of call to any of functions src_mongo() , src_sqlite() , src_elastic() , src_couchdb() or src_postgres()
key	(character) A key as name of the container (corresponds to parameter collection for MongoDB, dbname for CouchDB, index for Elasticsearch and to a table name for SQLite and for PostgreSQL)
value	The data to be created in the database: a single data.frame, a JSON string or a list; or the file name or URL of NDJSON documents
...	Passed to functions: <ul style="list-style-type: none"> • CouchDB: sofa::db_bulk_create() • Elasticsearch: elastic::docs_bulk • MongoDB: mongolite::mongo() • SQLite: ignored • PostgreSQL: ignored

Value

(integer) Number of successfully created documents

Identifiers

Any `_id`'s in value will be used as `_id`'s and primary index in the database. If there are no `_id`'s in value, row names (if any exist) will be used as `_id`'s, or random `_id`'s will be created (using [uuid::UUIDgenerate\(\)](#) with `use.time = TRUE`).

A warning is emitted if a document(s) with `_id`'s already exist in value and that document in value is not newly created in the database; use [docdb_update\(\)](#) to update such document(s).

Examples

```
## Not run:
src <- src_sqlite()
docdb_create(src, key = "diamonds_small",
  value = as.data.frame(diamonds[1:3000L,]))
head(docdb_get(src, "diamonds_small"))
```

```

docdb_create(src, key = "contacts", value = contacts)
docdb_get(src, "contacts")[["friends"]]

## End(Not run)

```

docdb_delete	<i>Delete documents or container</i>
--------------	--------------------------------------

Description

Delete documents or container

Usage

```
docdb_delete(src, key, ...)
```

Arguments

src	Source object, result of call to any of functions src_mongo() , src_sqlite() , src_elastic() , src_couchdb() or src_postgres()
key	(character) A key as name of the container (corresponds to parameter collection for MongoDB, dbname for CouchDB, index for Elasticsearch and to a table name for SQLite and for PostgreSQL)
...	optional query parameter with a JSON query as per mongolite::mongo() and as working in docdb_query() to identify documents to be deleted. The default is to delete the container key. Other parameters are passed on to functions: <ul style="list-style-type: none"> • MongoDB: find() in mongolite::mongo() • SQLite: ignored • Elasticsearch: elastic::Search() • CouchDB: sofa::db_alldocs() • PostgreSQL: ignored

Value

(logical) success of operation. Typically TRUE if document or collection existed and FALSE if document did not exist or collection did not exist or delete was not successful.

Examples

```

## Not run:
src <- src_sqlite()
docdb_create(src, "iris", iris)
docdb_delete(src, "iris", query = '{"Species": {"$regex": "a$"}}')
docdb_delete(src, "iris")

## End(Not run)

```

docdb_exists	<i>Check if container exists in database</i>
--------------	--

Description

Check if container exists in database

Usage

```
docdb_exists(src, key, ...)
```

Arguments

src	Source object, result of call to any of functions src_mongo() , src_sqlite() , src_elastic() , src_couchdb() or src_postgres()
key	(character) A key as name of the container (corresponds to parameter collection for MongoDB, dbname for CouchDB, index for Elasticsearch and to a table name for SQLite and for PostgreSQL)
...	Passed to functions: <ul style="list-style-type: none">• MongoDB: find() in mongolite::mongo()• RSQLite: DBI::dbListTables()• Elasticsearch: elastic::index_exists()• CouchDB: sofa::db_info()• PostgreSQL: DBI::dbListTables()

Value

(logical) TRUE or FALSE to indicate existence of container key in database

Examples

```
## Not run:
src <- src_sqlite()
docdb_exists(src, "nonexistingcontainer")
docdb_create(src, "mtcars", mtcars)
docdb_exists(src, "mtcars")

## End(Not run)
```

docdb_get	<i>Get all documents from container in database</i>
-----------	---

Description

Get all documents from container in database

Usage

```
docdb_get(src, key, limit = NULL, ...)
```

Arguments

src	Source object, result of call to any of functions src_mongo() , src_sqlite() , src_elastic() , src_couchdb() or src_postgres()
key	(character) A key as name of the container (corresponds to parameter collection for MongoDB, dbname for CouchDB, index for Elasticsearch and to a table name for SQLite and for PostgreSQL)
limit	(integer) Maximum number of documents to return (defaults to all for MongoDB, all for SQLite, 10,000 for Elasticsearch, all for CouchDB, and all for PostgreSQL)
...	Passed on to functions: <ul style="list-style-type: none">• MongoDB: find() in mongolite::mongo()• SQLite: ignored• Elasticsearch: elastic::Search()• CouchDB: sofa::db_alldocs()• PostgreSQL: ignored

Value

Document(s) in a data frame

Examples

```
## Not run:
src <- src_sqlite()
docdb_create(src, "mtcars", mtcars)
docdb_get(src, "mtcars", limit = 10L)

## End(Not run)
```

docdb_list	<i>List containers in database</i>
------------	------------------------------------

Description

List containers in database

Usage

```
docdb_list(src, ...)
```

Arguments

src	Source object, result of call to any of functions src_mongo() , src_sqlite() , src_elastic() , src_couchdb() or src_postgres()
...	Passed to functions: <ul style="list-style-type: none">• MongoDB: ignored• SQLite: DBI::dbListTables()• Elasticsearch: elastic::aliases_get()• CouchDB: sofa::db_info()• PostgreSQL: DBI::dbListTables()

Value

(vector) of names of containers that can be used as parameter key with other functions such as [docdb_create\(\)](#). Parameter key corresponds to collection for MongoDB, dbname for CouchDB, index for Elasticsearch and a table name for SQLite and PostgreSQL

Examples

```
## Not run:
src <- src_sqlite()
docdb_create(src, "iris", iris)
docdb_list(src)

## End(Not run)
```

docdb_query	<i>Get documents with a filtering query</i>
-------------	---

Description

Get documents with a filtering query

Usage

```
docdb_query(src, key, query, ...)
```

Arguments

src	Source object, result of call to any of functions src_mongo() , src_sqlite() , src_elastic() , src_couchdb() or src_postgres()
key	(character) A key as name of the container (corresponds to parameter collection for MongoDB, dbname for CouchDB, index for Elasticsearch and to a table name for SQLite and for PostgreSQL)
query	(character) A JSON query string, see examples
...	Optionally, fields a JSON string of fields to be returned from anywhere in the tree (dot paths notation). Main functions used per database: <ul style="list-style-type: none"> • MongoDB: find() in mongolite::mongo() • SQLite: SQL query using json_tree() • Elasticsearch: elastic::Search() • CouchDB: sofa::db_query() • PostgreSQL: SQL query using jsonb_build_object()

Value

Data frame with requested data, may have nested lists in columns

Examples

```
## Not run:
src <- src_sqlite()
docdb_create(src, "mtcars", mtcars)
docdb_query(src, "mtcars", query = '{"mpg":21}')
docdb_query(src, "mtcars", query = '{"mpg":21}', fields = '{"mpg":1, "cyl":1}')
docdb_query(src, "mtcars", query = '{"_id": {"$regex": "^.+0.*$"}}', fields = '{"gear": 1}')
# complex query, not supported for Elasticsearch and CouchDB backends at this time:
docdb_query(src, "mtcars", query = '{"$and": [{"mpg": {"$lte": 18}}, {"gear": {"$gt": 3}}]}')

## End(Not run)
```

docdb_update	<i>Update documents</i>
--------------	-------------------------

Description

Documents identified by the query are updated by patching their JSON with value. This is native with MongoDB and SQLite and is emulated for Elasticsearch and CouchDB using SQLite/JSON1, and uses a plpgsql function for PostgreSQL.

Usage

```
docdb_update(src, key, value, query, ...)
```

Arguments

src	Source object, result of call to any of functions src_mongo() , src_sqlite() , src_elastic() , src_couchdb() or src_postgres()
key	(character) A key as name of the container (corresponds to parameter collection for MongoDB, dbname for CouchDB, index for Elasticsearch and to a table name for SQLite and for PostgreSQL)
value	The data to be created in the database: a single data.frame, a JSON string or a list; or the file name or URL of NDJSON documents
query	(character) A JSON query string, see examples
...	Passed on to functions: <ul style="list-style-type: none"> • CouchDB: sofa::db_bulk_create() • Elasticsearch: elastic::docs_bulk_update • MongoDB: mongolite::mongo() • SQLite: ignored • PostgreSQL: ignored

Value

(integer) Number of successfully updated documents

Examples

```
## Not run:
src <- src_sqlite()
docdb_create(src, "mtcars", mtcars)
docdb_update(src, "mtcars", value = mtcars[3, 4:5], query = '{"gear": 3}')
docdb_update(src, "mtcars", value = '{"carb":999}', query = '{"gear": 5}')
docdb_get(src, "mtcars")

## End(Not run)
```

mapdata	<i>mapdata JSON data set</i>
---------	------------------------------

Description

mapdata JSON data set

Usage

mapdata

Format

A JSON string with ragged, nested map

nodbi-defunct	<i>Defunct functions in nodbi</i>
---------------	-----------------------------------

Description

- [src_etcd](#): etcd removed, with all its S3 methods for docdb_*
- [src_redis](#): redis removed, with all its S3 methods for docdb_*

src	<i>Setup database connections</i>
-----	-----------------------------------

Description

Setup database connections

Details

There is a `src_*`() function to setup a connection to each of the database backends. Each has their own unique set of parameters.

- MongoDB - [src_mongo\(\)](#)
- SQLite - [src_sqlite\(\)](#)
- Elasticsearch - [src_elastic\(\)](#)
- CouchDB - [src_couchdb\(\)](#)
- PostgreSQL - [src_postgres\(\)](#)

Documentation details for each database:

- MongoDB - <https://docs.mongodb.com/>
- SQLite/JSON1 - <https://www.sqlite.org/json1.html>
- Elasticsearch - <https://www.elastic.co/guide/en/elasticsearch/reference/current/index.html>
- CouchDB - <http://docs.couchdb.org/>
- PostgreSQL - <https://www.postgresql.org/docs/current/functions-json.html>

Documentation for R packages used by nodbi for the databases:

- mongolite - <https://CRAN.R-project.org/package=mongolite>
- RSQLite - <https://CRAN.R-project.org/package=RSQLite>
- elastic - <https://CRAN.R-project.org/package=elastic>
- sofa - <https://CRAN.R-project.org/package=sofa>
- RPostgres - <https://rpostgres.r-dbi.org/>

src_couchdb

Setup a CouchDB database connection

Description

Setup a CouchDB database connection

Usage

```
src_couchdb(
  host = "127.0.0.1",
  port = 5984,
  path = NULL,
  transport = "http",
  user = NULL,
  pwd = NULL,
  headers = NULL
)
```

Arguments

host	(character) host value, default: 127.0.0.1
port	(integer/numeric) Port. Remember that if you don't want a port set, set this parameter to NULL. Default: 5984
path	(character) context path that is appended to the end of the url, e.g., bar in http://foo.com/bar . Default: NULL, ignored
transport	(character) http or https. Default: http
user	(character) Username, if any
pwd	(character) Password, if any
headers	(list) list of named headers

Details

uses **sofa** under the hood; uses `sofa::Cushion()` for connecting

Examples

```
## Not run:
src_couchdb()

## End(Not run)
```

src_elastic

Setup an Elasticsearch database connection

Description

Setup an Elasticsearch database connection

Usage

```
src_elastic(
  host = "127.0.0.1",
  port = 9200,
  path = NULL,
  transport_schema = "http",
  user = NULL,
  pwd = NULL,
  force = FALSE,
  ...
)
```

Arguments

host	(character) the base url, defaults to localhost (<code>http://127.0.0.1</code>)
port	(character) port to connect to, defaults to 9200 (optional)
path	(character) context path that is appended to the end of the url. Default: NULL, ignored
transport_schema	(character) http or https. Default: http
user	(character) User name, if required for the connection. You can specify, but ignored for now.
pwd	(character) Password, if required for the connection. You can specify, but ignored for now.
force	(logical) Force re-load of connection details
...	Further args passed on to <code>elastic::connect()</code>

Details

uses **elastic** under the hood; uses `elastic::connect()` for connecting

Examples

```
## Not run:  
src_elastic()  
  
## End(Not run)
```

src_mongo

Setup a MongoDB database connection

Description

Setup a MongoDB database connection

Usage

```
src_mongo(collection = "test", db = "test", url = "mongodb://localhost", ...)
```

Arguments

collection	(character) Name of collection
db	(character) Name of database
url	(character) Address of the MongoDB server in Mongo connection string URI format, see to <code>mongolite::mongo()</code>
...	Additional named parameters passed on to <code>mongolite::mongo()</code>

Details

Uses **monoglite** under the hood; uses `mongolite::mongo()` for connecting

Examples

```
## Not run:  
con <- src_mongo()  
print(con)  
  
## End(Not run)
```

src_postgres *Setup a PostgreSQL database connection*

Description

Setup a PostgreSQL database connection

Usage

```
src_postgres(dbname = "test", host = "localhost", port = 5432L, ...)
```

Arguments

dbname	(character) name of database, has to exist to open a connection
host	(character) host of the database, see RPostgres::Postgres()
port	(integer) port of the database, see RPostgres::Postgres()
...	additional named parameters passed on to RPostgres::Postgres()

Details

uses **RPostgres** under the hood

Examples

```
## Not run:  
con <- src_postgres()  
print(con)  
  
## End(Not run)
```

src_sqlite *Setup a RSQLite database connection*

Description

Setup a RSQLite database connection

Usage

```
src_sqlite(dbname = ":memory:", ...)
```

Arguments

dbname	(character) name of database file, defaults to ":memory:" for an in-memory database, see RSQLite::SQLite()
...	additional named parameters passed on to RSQLite::SQLite()

Details

uses **RSQLite** under the hood

Examples

```
## Not run:  
con <- src_sqlite()  
print(con)  
  
## End(Not run)
```
