Package 'shinyWidgets'

October 6, 2020

Title Custom Inputs Widgets for Shiny

Version 0.5.4

Description
Collection of custom input controls and user interface components for 'Shiny' applications. Give your applications a unique and colorful style !

URL https://github.com/dreamRs/shinyWidgets

BugReports https://github.com/dreamRs/shinyWidgets/issues

License GPL-3

Encoding UTF-8

LazyData true

RoxygenNote 7.1.1

Depends R (>= 3.1.0)

Imports shiny (>= 0.14), htmltools, jsonlite, grDevices

Suggests shinydashboard, testthat, covr, shinydashboardPlus, bs4Dash, argonR, argonDash, tablerDash, ggplot2, DT, scales

NeedsCompilation no

R topics documented:

`actionBttn` *Awesome action button*

Description

Like `actionButton` but awesome, via https://bttn.surge.sh/

Usage

```
actionBttn(
  inputId,
  label = NULL,
  icon = NULL,
  style = "unite",
  color = "default",
  size = "md",
  block = FALSE,
  no_outline = TRUE
)
```

Arguments

`inputId`	The `input` slot that will be used to access the value.
`label`	The contents of the button, usually a text label.
`icon`	An optional icon to appear on the button.
`style`	Style of the button, to choose between `simple`, `bordered`, `minimal`, `stretch`, `jelly`, `gradient`, `fill`, `material-circle`, `material-flat`, `pill`, `float`, `unite`.
`color`	Color of the button : `default`, `primary`, `warning`, `danger`, `success`, `royal`.
`size`	Size of the button : `xs`,`sm`, `md`, `lg`.
`block`	Logical, full width button.
`no_outline`	Logical, don't show outline when navigating with keyboard/interact using mouse or touch.

See Also

downloadBttn

Examples

```
if (interactive()) {

library(shiny)
library(shinyWidgets)

ui <- fluidPage(
  tags$h2("Awesome action button"),
  tags$br(),
  actionBttn(
    inputId = "bttn1",
    label = "Go!",
    color = "primary",
    style = "bordered"
  ),
  tags$br(),
  verbatimTextOutput(outputId = "res_bttn1"),
  tags$br(),
  actionBttn(
    inputId = "bttn2",
    label = "Go!",
    color = "success",
    style = "material-flat",
    icon = icon("sliders"),
    block = TRUE
  ),
  tags$br(),
  verbatimTextOutput(outputId = "res_bttn2")
)

server <- function(input, output, session) {
  output$res_bttn1 <- renderPrint(input$bttn1)
  output$res_bttn2 <- renderPrint(input$bttn2)
}

shinyApp(ui = ui, server = server)

}
```

`actionGroupButtons` *Actions Buttons Group Inputs*

Description

Create a group of actions buttons.

Usage

```
actionGroupButtons(
```

```
  inputIds,
  labels,
  status = "default",
  size = "normal",
  direction = "horizontal",
  fullwidth = FALSE
)
```

Arguments

inputIds	The inputs slot that will be used to access the value, one for each button.
labels	Labels for each buttons, must have same length as inputIds.
status	Add a class to the buttons, you can use Bootstrap status like 'info', 'primary', 'danger', 'warning' or 'success'. Or use an arbitrary strings to add a custom class, e.g. : with status = 'myClass', buttons will have class btn-myClass.
size	Size of the buttons ('xs', 'sm', 'normal', 'lg').
direction	Horizontal or vertical.
fullwidth	If TRUE, fill the width of the parent div.

Value

An actions buttons group control that can be added to a UI definition.

Examples

```
if (interactive()) {
  library("shiny")
  library("shinyWidgets")

  ui <- fluidPage(
    br(),
    actionGroupButtons(
      inputIds = c("btn1", "btn2", "btn3"),
      labels = list("Action 1", "Action 2", tags$span(icon("gear"), "Action 3")),
      status = "primary"
    ),
    verbatimTextOutput(outputId = "res1"),
    verbatimTextOutput(outputId = "res2"),
    verbatimTextOutput(outputId = "res3")
  )

  server <- function(input, output, session) {

    output$res1 <- renderPrint(input$btn1)

    output$res2 <- renderPrint(input$btn2)

    output$res3 <- renderPrint(input$btn3)

  }
```

```
  shinyApp(ui = ui, server = server)
}
```

---

addSpinner *Display a spinner above an output when this one recalculate*

Description

Display a spinner above an output when this one recalculate

Usage

```
addSpinner(output, spin = "double-bounce", color = "#112446")
```

Arguments

output	An output element, typically the result of `renderPlot`.
spin	Style of the spinner, choice between : `circle`, `bounce`, `folding-cube`, `rotating-plane`, `cube-grid`, `fading-circle`, `double-bounce`, `dots`, `cube`.
color	Color for the spinner.

Value

a list of tags

Note

The spinner don't disappear from the page, it's only masked by the plot, so the plot must have a non-transparent background. For a more robust way to insert loaders, see package "shinycssloaders".

Examples

```
# wrap an output:
addSpinner(shiny::plotOutput("plot"))

# Complete demo:

if (interactive()) {

library(shiny)
library(shinyWidgets)

ui <- fluidPage(
  tags$h2("Exemple spinners"),
  actionButton(inputId = "refresh", label = "Refresh", width = "100%"),
  fluidRow(
    column(
      width = 5, offset = 1,
```

```
      addSpinner(plotOutput("plot1"), spin = "circle", color = "#E41A1C"),
      addSpinner(plotOutput("plot3"), spin = "bounce", color = "#377EB8"),
      addSpinner(plotOutput("plot5"), spin = "folding-cube", color = "#4DAF4A"),
      addSpinner(plotOutput("plot7"), spin = "rotating-plane", color = "#984EA3"),
      addSpinner(plotOutput("plot9"), spin = "cube-grid", color = "#FF7F00")
    ),
    column(
      width = 5,
      addSpinner(plotOutput("plot2"), spin = "fading-circle", color = "#FFFF33"),
      addSpinner(plotOutput("plot4"), spin = "double-bounce", color = "#A65628"),
      addSpinner(plotOutput("plot6"), spin = "dots", color = "#F781BF"),
      addSpinner(plotOutput("plot8"), spin = "cube", color = "#999999")
    )
  ),
  actionButton(inputId = "refresh2", label = "Refresh", width = "100%")
)

server <- function(input, output, session) {

  dat <- reactive({
    input$refresh
    input$refresh2
    Sys.sleep(3)
    Sys.time()
  })

  lapply(
    X = seq_len(9),
    FUN = function(i) {
      output[[paste0("plot", i)]] <- renderPlot({
        dat()
        plot(sin, -pi, i*pi)
      })
    }
  )

}

shinyApp(ui, server)

}
```

`airDatepicker` *Air Date Picker Input*

Description

An alternative to `dateInput` to select single, multiple or date range. And two alias to select months or years.

Usage

```
airDatepickerInput(
  inputId,
  label = NULL,
  value = NULL,
  multiple = FALSE,
  range = FALSE,
  timepicker = FALSE,
  separator = " - ",
  placeholder = NULL,
  dateFormat = "yyyy-mm-dd",
  firstDay = NULL,
  minDate = NULL,
  maxDate = NULL,
  disabledDates = NULL,
  view = c("days", "months", "years"),
  startView = NULL,
  minView = c("days", "months", "years"),
  monthsField = c("monthsShort", "months"),
  clearButton = FALSE,
  todayButton = FALSE,
  autoClose = FALSE,
  timepickerOpts = timepickerOptions(),
  position = NULL,
  update_on = c("change", "close"),
  addon = c("right", "left", "none"),
  language = "en",
  inline = FALSE,
  onlyTimepicker = FALSE,
  width = NULL
)

timepickerOptions(
  dateTimeSeparator = NULL,
  timeFormat = NULL,
  minHours = NULL,
  maxHours = NULL,
  minMinutes = NULL,
  maxMinutes = NULL,
  hoursStep = NULL,
  minutesStep = NULL
)

airMonthpickerInput(inputId, label = NULL, value = NULL, ...)

airYearpickerInput(inputId, label = NULL, value = NULL, ...)
```

Arguments

inputId	The input slot that will be used to access the value.
label	Display label for the control, or NULL for no label.
value	Initial value(s), dates as character string are accepted in yyyy-mm-dd format, or Date/POSIXct object. Can be a single value or several values.
multiple	Select multiple dates. If TRUE, then one can select unlimited dates. If numeric is passed, then amount of selected dates will be limited by it.
range	Select a date range.
timepicker	Add a timepicker below calendar to select time.
separator	Separator between dates when several are selected, default to " -".
placeholder	A character string giving the user a hint as to what can be entered into the control.
dateFormat	Format to use to display date(s), default to "yyyy-mm-dd".
firstDay	Day index from which week will be started. Possible values are from 0 to 6, where 0 - Sunday and 6 - Saturday. By default value is taken from current localization, but if it passed here then it will have higher priority.
minDate	The minimum allowed date. Either a Date object, or a string in yyyy-mm-dd format.
maxDate	The maximum allowed date. Either a Date object, or a string in yyyy-mm-dd format.
disabledDates	A vector of dates to disable, e.g. won't be able to select one of dates passed.
view	Starting view, one of 'days' (default), 'months' or 'years'.
startView	Date shown in calendar when date picker is opened.
minView	Minimal view, one of 'days' (default), 'months' or 'years'.
monthsField	Names for the months when view is 'months', use 'monthsShort' for abbreviations or 'months' for full names.
clearButton	If TRUE, then button "Clear" will be visible.
todayButton	If TRUE, then button "Today" will be visible to set view to current date, if a Date is used, it will set view to the given date and select it..
autoClose	If TRUE, then after date selection, datepicker will be closed.
timepickerOpts	Options for timepicker, see timepickerOptions.
position	Where calendar should appear, a two word string like 'bottom left' (default), or 'top right', 'left top'.
update_on	When to send selected value to server: on 'change' or when calendar is 'close'd.
addon	Display a calendar icon to 'right' or the 'left' of the widget, or 'none'. This icon act likes an actionButton, you can retrieve value server-side with input$<inputId>_button.
language	Language to use, can be one of 'cs', 'da', 'de', 'en', 'es', 'fi', 'fr', 'hu', 'nl', 'pl', 'pt-BR', \code'pt', 'ro', 'ru', 'sk', 'zh', 'ja'.
inline	If TRUE, datepicker will always be visible.

onlyTimepicker	Display only the time picker.
width	The width of the input, e.g. '400px', or '100%'.
dateTimeSeparator	Separator between date and time, default to " ".
timeFormat	Desirable time format. You can use h (hours), hh (hours with leading zero), i (minutes), ii (minutes with leading zero), aa (day period - 'am' or 'pm'), AA (day period capitalized)
minHours	Minimal hours value, must be between 0 and 23. You will not be able to choose value lower than this.
maxHours	Maximum hours value, must be between 0 and 23. You will not be able to choose value higher than this.
minMinutes	Minimal minutes value, must be between 0 and 59. You will not be able to choose value lower than this.
maxMinutes	Maximum minutes value, must be between 0 and 59. You will not be able to choose value higher than this.
hoursStep	Hours step in slider.
minutesStep	Minutes step in slider.
...	Arguments passed to airDatepickerInput.

Value

a Date object or a POSIXct in UTC timezone.

Note

Since shinyWidgets 0.5.2 there's no more conflicts with dateInput.

See Also

See updateAirDateInput for updating slider value server-side. And demoAirDatepicker for examples.

Examples

```
if (interactive()) {

# examples of different options to select dates:
demoAirDatepicker("datepicker")

# select month(s)
demoAirDatepicker("months")

# select year(s)
demoAirDatepicker("years")

# select date and time
demoAirDatepicker("timepicker")
```

```
# You can select multiple dates :
library(shiny)
library(shinyWidgets)

ui <- fluidPage(
  airDatepickerInput(
    inputId = "multiple",
    label = "Select multiple dates:",
    placeholder = "You can pick 5 dates",
    multiple = 5, clearButton = TRUE
  ),
  verbatimTextOutput("res")
)

server <- function(input, output, session) {
  output$res <- renderPrint(input$multiple)
}

shinyApp(ui, server)

}
```

`animateOptions` *Animate options*

Description

Animate options

Usage

```
animateOptions(enter = "fadeInDown", exit = "fadeOutUp", duration = 1)
```

Arguments

`enter`	Animation name on appearance
`exit`	Animation name on disappearance
`duration`	Duration of the animation

Value

a list

See Also

`animations`

Examples

```
## Only run examples in interactive R sessions
if (interactive()) {

dropdown(
 "Your contents goes here ! You can pass several elements",
 circle = TRUE, status = "danger", icon = icon("gear"), width = "300px",
 animate = animateOptions(enter = "fadeInDown", exit = "fadeOutUp", duration = 3)
)

}
```

---

animations *Animation names*

Description

List of all animations by categories

Usage

```
animations
```

Format

A list of lists

Source

https://github.com/animate-css/animate.css

---

appendVerticalTab *Mutate Vertical Tabset Panel*

Description

Mutate Vertical Tabset Panel

Usage

```
appendVerticalTab(inputId, tab, session = shiny::getDefaultReactiveDomain())

removeVerticalTab(inputId, index, session = shiny::getDefaultReactiveDomain())

reorderVerticalTabs(
  inputId,
  newOrder,
  session = shiny::getDefaultReactiveDomain()
)
```

Arguments

inputId	The id of the verticalTabsetPanel object.
tab	The verticalTab to append.
session	The session object passed to function given to shinyServer.
index	The index of the the tab to remove.
newOrder	The new index order.

Examples

```
if (interactive()) {

library(shiny)
library(shinyWidgets)

ui <- fluidPage(

  verticalTabsetPanel(
    verticalTabPanel("blaa","foo"),
    verticalTabPanel("yarp","bar"),
    id="hippi"
  )
)

server <- function(input, output, session) {
  appendVerticalTab("hippi", verticalTabPanel("bipi","long"))
  removeVerticalTab("hippi", 1)
  appendVerticalTab("hippi", verticalTabPanel("howdy","fair"))
  reorderVerticalTabs("hippi", c(3,2,1))
}

# Run the application
shinyApp(ui = ui, server = server)

}
```

---

autonumericInput *Autonumeric Input Widget*

Description

An R wrapper over the javascript AutoNumeric library, for formatting numeric inputs in shiny applications.

Usage

```
autonumericInput(
  inputId,
  label,
  value,
  width = NULL,
  align = "center",
  currencySymbol = NULL,
  currencySymbolPlacement = NULL,
  decimalCharacter = NULL,
  digitGroupSeparator = NULL,
  allowDecimalPadding = NULL,
  decimalPlaces = NULL,
  divisorWhenUnfocused = NULL,
  rawValueDivisor = NULL,
  formatOnPageLoad = NULL,
  maximumValue = NULL,
  minimumValue = NULL,
  modifyValueOnWheel = NULL,
  ...
)
```

Arguments

`inputId`	The `input` slot that will be used to access the value.
`label`	Display label for the control, or NULL for no label.
`value`	Initial value (unformatted).
`width`	The width of the input box, eg. `"200px"` or `"100%"`.
`align`	The alignment of the text inside the input box, one of "center" (default), "left", "right".
`currencySymbol`	Defines the currency symbol string. It can be a string of more than one character (allowing for instance to use a space on either side of it, example: '$ ' or ' $'). Defaults to "".
`currencySymbolPlacement`	Defines where the currency symbol should be placed, "p" for prefix or "s" for suffix (default).
`decimalCharacter`	Defines what decimal separator character is used. Defaults to ",".
`digitGroupSeparator`	Defines what decimal separator character is used. Defaults to ".".
`allowDecimalPadding`	Defines if decimal places should be padded with zeros. Defaults to TRUE.
`decimalPlaces`	Defines the default number of decimal places to show on the formatted value, and keep for the precision. Must be 0 or a positive integer. Defaults to 2.

`divisorWhenUnfocused`
: The number that divides the element value on blur. On focus, the number is multiplied back in. Defaults to NULL.

`rawValueDivisor`
: Divides the formatted value shown in the AutoNumeric element and store the divided result in `rawValue`. Defaults to 1.

`formatOnPageLoad`
: Determine if the default value will be formatted on initialization. Defaults to TRUE.

`maximumValue`
: Defines the maximum possible value a user can enter.

`minimumValue`
: Defines the minimum possible value a user can enter.

`modifyValueOnWheel`
: Allows the user to increment or decrement the element value with the mouse wheel. The wheel behavior can be modified by the `wheelStep` option. Defaults to TRUE.

`...`
: Additional parameters that can be passed to AutoNumeric. See details for more information.

Details

This function wraps the AutoNumeric.js library. The parameter documentation provided here should be sufficient for most users, but for those wishing to use advanced configurations it is advised to look at the documentation on the AutoNumeric GitHub repository. Alexandre Bonneau has done a wonderful job of documenting all parameters and full explanations of all parameters and their associated values can be found there.

The `...` parameter can take any of the arguments listed on the AutoNumeric GitHub repository. A quick reference follows:

- decimalPlacesRawValue - Defines How many decimal places should be kept for the raw value. If set to NULL (default) then `decimalPlaces` is used.
- decimalPlacesShownOnBlur - Defines how many decimal places should be visible when the element is unfocused. If NULL (default) then `decimalPlaces` is used.
- decimalPlacesShownOnFocus - Defines how many decimal places should be visible when the element has the focus. If NULL (default) then `decimalPlaces` is used.
- digitalGroupSpacing - Defines how many numbers should be grouped together for the thousands separator groupings. Must be one of c("2", "2s", "3", "4"). Defaults to 3.
- alwaysAllowDecimalCharacter - Defines if the decimal character or decimal character alternative should be accepted when there is already a decimal character shown in the element. If set to TRUE, any decimal character input will be accepted and will subsequently modify the decimal character position, as well as the rawValue. If set to FALSE, the decimal character and its alternative key will be dropped. This is the default setting.
- createLocalList - Defines if a local list of AutoNumeric objects should be kept when initializing this object. Defaults to TRUE.
- decimalCharacterAlternative - Allow to declare an alternative decimal separator which is automatically replaced by `decimalCharacter` when typed. This is useful for countries that use a

comma ',' as the decimal character and have keyboards with numeric pads providing a period '.' as the decimal character (in France or Spain for instance). Must be NULL (default), ",", or ".".

- emptyInputBehavior - Defines what should be displayed in the element if the raw value is missing. One of c(NULL, "focus", "press", "always", "min", "max", "zero") or a custom value. Defaults to NULL. See AutoNumeric GitHub repository for full details.
- selectNumberOnly - Determine if the select all keyboard command will select the complete input text, or only the input numeric value. Defaults to TRUE.
- selectOnFocus - Defines if the element value should be selected on focus. Note: The selection is done using the `selectNumberOnly` option. Defaults to TRUE.
- eventBubbles - Defines if the custom and native events triggered by AutoNumeric should bubble up or not. Defaults to TRUE.
- eventIsCancelable - Defines if the custom and native events triggered by AutoNumeric should be cancelable. Defaults to TRUE.
- formulaMode - Defines if the formula mode can be activated by the user. If set to true, then the user can enter the formula mode by entering the '=' character. The user will then be allowed to enter any simple math formula using numeric characters as well as the following operators: +, -, *, /, (and). The formula mode is exited when the user either validate their math expression using the Enter key, or when the element is blurred. Defaults to FALSE.
- historySize - Set the undo/redo history table size. Defaults to 20.
- isCancellable - Allow the user to cancel and undo the changes he made to the given autonumeric-managed element, by pressing the `Escape` key. Defaults to TRUE.
- leadingZero - This options describes if entering 0 on the far left of the numbers is allowed, and if the superfluous zeroes should be kept when the input is blurred. One of c("allow", "deny", and "keep"). Defaults to "deny". See AutoNumeric GitHub repository for full details.
- wheelOn - Defines when the wheel event will increment or decrement the element value. One of c("focus", "hover"). Defaults to "focus".
- wheelStep - Defines by how much the element value should be incremented/decremented on the wheel event. Can be a set value or the string "progressive" which determines the step from the size of the input. Defaults to "progressive".
- negativeBracketsTypeOnBlur - Adds brackets-like characters on negative values when unfocused. Those brackets are visible only when the field does not have the focus. The left and right symbols should be enclosed in quotes and separated by a comma. Defaults to NULL.
- negativePositiveSignPlacement - Placement of the negative/positive sign relative to the `currencySymbol` option. One of c("p", "s", "l", "r", NULL), defaults to NULL. See AutoNumeric GitHub repository for further documentation.
- negativeSignCharacter - Defines the negative sign symbol to use. Must be a single character and be non-numeric. Defaults to "-".
- positiveSignCharacter - Defines the positive sign symbol to use. Must be a single character and be non-numeric. Defaults to "+".
- showPositiveSign - Allow the positive sign symbol `positiveSignCharacter` to be displayed for positive numbers. Defaults to FALSE.
- onInvalidPaste - Manage how autoNumeric react when the user tries to paste an invalid number. One of c("error", "ignore", "clamp", "truncate", "replace"). Defaults to "error".

- overrideMinMaxLimits - Override the minimum and maximum limits. Must be one of c("ceiling", "floor", "ignore", NULL). Defaults to "ceiling".
- readOnly - Defines if the element (<input> or another allowed html tag) should be set as read only on initialization. Defaults to FALSE.
- roundingMethod - Defines the rounding method to use. One of c("S", "A", "s", "a", "B", "U", "D", "C", "F", "N05", "CHF", "U05", "D05"). Defaults to "S". See AutoNumeric GitHub repository for further documentation.
- saveValueToSessionStorage - Set to TRUE to allow the `decimalPlacesShownOnFocus` value to be saved with sessionStorage. Defaults to FALSE.
- serializeSpaces - Defines how the serialize functions should treat the spaces. Either "+" (default) or "%20" (the older behavior).
- showOnlyNumbersOnFocus - Defines if the element value should be converted to the raw value on focus or mouseenter, (and back to the formatted on blur or mouseleave). Defaults to FALSE.
- showWarnings - Defines if warnings should be shown in the console. Defaults to TRUE.
- styleRules - Defines the rules that calculate the CSS class(es) to apply on the element, based on the raw unformatted value. Defaults to NULL.
- suffixText - Add a text on the right hand side of the element value. This suffix text can have any characters in its string, except numeric characters and the negative or positive sign. Defaults to NULL.
- symbolWhenUnfocused - Defines the symbol placed as a suffix when not in focus or hovered. Defaults to NULL.
- unformatOnHover - Defines if the element value should be unformatted when the user hover his mouse over it while holding the Alt key. Defaults to TRUE.
- valuesToStrings - Provides a way for automatically replacing the formatted value with a predefined string, when the raw value is equal to a specific value. Defaults to NULL.
- watchExternalChanges - Defines if the AutoNumeric element should watch external changes made without using `.set()`. Defaults to FALSE.

Value

An autonumericInput object to be used in the UI function of a Shiny App.

}
```

`awesomeCheckbox` *Awesome Checkbox Input Control*

Description

Create a Font Awesome Bootstrap checkbox that can be used to specify logical values.

Usage

```
awesomeCheckbox(
  inputId,
  label,
  value = FALSE,
  status = "primary",
  width = NULL
)
```

Arguments

`inputId`	The `input` slot that will be used to access the value.
`label`	Input label.
`value`	Initial value (TRUE or FALSE).
`status`	Color of the buttons, a valid Bootstrap status : default, primary, info, success, warning, danger.
`width`	The width of the input

Value

A checkbox control that can be added to a UI definition.

See Also

`updateAwesomeCheckbox`

Examples

```
## Only run examples in interactive R sessions
if (interactive()) {

ui <- fluidPage(
 awesomeCheckbox(inputId = "somevalue",
                 label = "A single checkbox",
                 value = TRUE,
                 status = "danger"),
 verbatimTextOutput("value")
```

```
)
server <- function(input, output) {
  output$value <- renderText({ input$somevalue })
}
shinyApp(ui, server)
}
```

---

awesomeCheckboxGroup *Awesome Checkbox Group Input Control*

Description

Create a Font Awesome Bootstrap checkbox that can be used to specify logical values.

Usage

```
awesomeCheckboxGroup(
  inputId,
  label,
  choices,
  selected = NULL,
  inline = FALSE,
  status = "primary",
  width = NULL
)
```

Arguments

inputId	The input slot that will be used to access the value.
label	Input label.
choices	List of values to show checkboxes for.
selected	The values that should be initially selected, if any.
inline	If TRUE, render the choices inline (i.e. horizontally)
status	Color of the buttons
width	The width of the input

Value

A checkbox control that can be added to a UI definition.

See Also

updateAwesomeCheckboxGroup

Examples

```
if (interactive()) {

ui <- fluidPage(
  br(),
  awesomeCheckboxGroup(
    inputId = "id1", label = "Make a choice:",
    choices = c("graphics", "ggplot2")
  ),
  verbatimTextOutput(outputId = "res1"),
  br(),
  awesomeCheckboxGroup(
    inputId = "id2", label = "Make a choice:",
    choices = c("base", "dplyr", "data.table"),
    inline = TRUE, status = "danger"
  ),
  verbatimTextOutput(outputId = "res2")
)

server <- function(input, output, session) {

  output$res1 <- renderPrint({
    input$id1
  })

  output$res2 <- renderPrint({
    input$id2
  })

}

shinyApp(ui = ui, server = server)

}
```

`awesomeRadio` *Awesome Radio Buttons Input Control*

Description

Create a set of prettier radio buttons used to select an item from a list.

Usage

```
awesomeRadio(
  inputId,
  label,
```

```
  choices,
  selected = NULL,
  inline = FALSE,
  status = "primary",
  checkbox = FALSE,
  width = NULL
)
```

Arguments

inputId	The input slot that will be used to access the value.
label	Display label for the control, or NULL for no label.
choices	List of values to select from (if elements of the list are named then that name rather than the value is displayed to the user)
selected	The initially selected value (if not specified then defaults to the first value).
inline	If TRUE, render the choices inline (i.e. horizontally).
status	Color of the buttons, a valid Bootstrap status : default, primary, info, success, warning, danger.
checkbox	Logical, render radio like checkboxes (with a square shape).
width	The width of the input, e.g. 400px, or 100%.

Value

A set of radio buttons that can be added to a UI definition.

See Also

updateAwesomeRadio

Examples

```
## Only run examples in interactive R sessions
if (interactive()) {

ui <- fluidPage(
  br(),
  awesomeRadio(
    inputId = "id1", label = "Make a choice:",
    choices = c("graphics", "ggplot2")
  ),
  verbatimTextOutput(outputId = "res1"),
  br(),
  awesomeRadio(
    inputId = "id2", label = "Make a choice:",
    choices = c("base", "dplyr", "data.table"),
    inline = TRUE, status = "danger"
  ),
  verbatimTextOutput(outputId = "res2")
)
```

```
server <- function(input, output, session) {

  output$res1 <- renderPrint({
    input$id1
  })

  output$res2 <- renderPrint({
    input$id2
  })

}

shinyApp(ui = ui, server = server)

}
```

---

bootstrap-utils *Bootstrap panel / alert*

Description

Create a panel (box) with basic border and padding, you can use Bootstrap status to style the panel, see https://getbootstrap.com/docs/3.4/components/#panels.

Usage

```
panel(
  ...,
  heading = NULL,
  footer = NULL,
  extra = NULL,
  status = c("default", "primary", "success", "info", "warning", "danger")
)

alert(
  ...,
  status = c("info", "success", "danger", "warning"),
  dismissible = FALSE
)

list_group(...)
```

Arguments

...	UI elements to include inside the panel or alert.
heading	Title for the panel in a plain header.
footer	Footer for the panel.

extra	Additional elements to include like a table or a list_group, see examples.
status	Bootstrap status for contextual alternative.
dismissible	Adds the possibility to close the alert.

Value

A UI definition.

Examples

```
# Panels ---------------------------------

library(shiny)
library(shinyWidgets)

ui <- fluidPage(

  tags$h2("Bootstrap panel"),

  # Default
  panel(
    "Content goes here",
  ),

  # With header and footer
  panel(
    "Content goes here",
    heading = "My title",
    footer = "Something"
  ),

  # With status
  panel(
    "Content goes here",
    heading = "My title",
    status = "primary"
  ),

  # With table
  panel(
    heading = "A famous table",
    extra = tableOutput(outputId = "table")
  ),

  # With list group
  panel(
    heading = "A list of things",
    extra = list_group(
      "First item",
      "Second item",
      "And third item"
```

```
    )
  )
)

server <- function(input, output, session) {

  output$table <- renderTable({
    head(mtcars)
  }, width = "100%")

}

if (interactive())
  shinyApp(ui = ui, server = server)

# Alerts ---------------------------------

library(shiny)
library(shinyWidgets)

ui <- fluidPage(
  tags$h2("Alerts"),
  fluidRow(
    column(
      width = 6,
      alert(
        status = "success",
        tags$b("Well done!"), "You successfully read this important alert message."
      ),
      alert(
        status = "info",
      tags$b("Heads up!"), "This alert needs your attention, but it's not super important."
      ),
      alert(
        status = "info",
        dismissible = TRUE,
        tags$b("Dismissable"), "You can close this one."
      )
    ),
    column(
      width = 6,
      alert(
        status = "warning",
        tags$b("Warning!"), "Better check yourself, you're not looking too good."
      ),
      alert(
        status = "danger",
        tags$b("Oh snap!"), "Change a few things up and try submitting again."
      )
```

```
    )
  )
)

server <- function(input, output, session) {

}

if (interactive())
  shinyApp(ui, server)

# List group -----------------------------

library(shiny)
library(shinyWidgets)

ui <- fluidPage(
  tags$h2("List group"),

  tags$b("List of item:"),

    "First item",
    "Second item",
    "And third item"
  ),

  tags$b("Set active item:"),
  list_group(
    list(class = "active", "First item"),
    "Second item",
    "And third item"
  )
)

server <- function(input, output, session) {

}

if (interactive())
  shinyApp(ui, server)
```

---

checkboxGroupButtons *Buttons Group checkbox Input Control*

Description

Create buttons grouped that act like checkboxes.

Usage

```
checkboxGroupButtons(
  inputId,
  label = NULL,
  choices = NULL,
  selected = NULL,
  status = "default",
  size = "normal",
  direction = "horizontal",
  justified = FALSE,
  individual = FALSE,
  checkIcon = list(),
  width = NULL,
  choiceNames = NULL,
  choiceValues = NULL,
  disabled = FALSE
)
```

Arguments

`inputId`	The `input` slot that will be used to access the value.
`label`	Input label.
`choices`	List of values to select from (if elements of the list are named then that name rather than the value is displayed to the user)
`selected`	The initially selected value.
`status`	Add a class to the buttons, you can use Bootstrap status like 'info', 'primary', 'danger', 'warning' or 'success'. Or use an arbitrary strings to add a custom class, e.g. : with `status = 'myClass'`, buttons will have class `btn-myClass`.
`size`	Size of the buttons ('xs', 'sm', 'normal', 'lg')
`direction`	Horizontal or vertical.
`justified`	If TRUE, fill the width of the parent div.
`individual`	If TRUE, buttons are separated.
`checkIcon`	A list, if no empty must contain at least one element named 'yes' corresponding to an icon to display if the button is checked.
`width`	The width of the input, e.g. '400px', or '100%'.
`choiceNames, choiceValues`	Same as in `checkboxGroupInput`. List of names and values, respectively, that are displayed to the user in the app and correspond to the each choice (for this reason, `choiceNames` and `choiceValues` must have the same length).
`disabled`	Initialize buttons in a disabled state (users won't be able to select a value).

Value

A buttons group control that can be added to a UI definition.

updateCheckboxGroupButtons

Examples

```
if (interactive()) {

  ui <- fluidPage(
    tags$h1("checkboxGroupButtons examples"),

    checkboxGroupButtons(
      inputId = "somevalue1",
      label = "Make a choice: ",
      choices = c("A", "B", "C")
    ),
    verbatimTextOutput("value1"),

    checkboxGroupButtons(
      inputId = "somevalue2",
      label = "With custom status:",
      choices = names(iris),
      status = "primary"
    ),
    verbatimTextOutput("value2"),

    checkboxGroupButtons(
      inputId = "somevalue3",
      label = "With icons:",
      choices = names(mtcars),
      checkIcon = list(
        yes = icon("check-square"),
        no = icon("square-o")
      )
    ),
    verbatimTextOutput("value3")
  )
  server <- function(input, output) {

    output$value1 <- renderPrint({ input$somevalue1 })
    output$value2 <- renderPrint({ input$somevalue2 })
    output$value3 <- renderPrint({ input$somevalue3 })

  }
  shinyApp(ui, server)

}
```

---

chooseSliderSkin *Theme selector for* sliderInput

Description

Customize the appearance of the original shiny's `sliderInput`

Usage

```
chooseSliderSkin(
  skin = c("Shiny", "Flat", "Modern", "Nice", "Simple", "HTML5", "Round", "Square"),
  color = NULL
)
```

Arguments

`skin`	The `skin` to apply. Choose among 5 different flavors, namely 'Shiny', 'Flat', 'Modern', 'Nice', 'Simple', 'HTML5', 'Round' and 'Square'.
`color`	A color to apply to all sliders. Works with following skins: 'Shiny', 'Flat', 'Modern', 'HTML5'. For 'Flat' a CSS filter is applied, desired color maybe a little offset.

Note

It is not currently possible to apply multiple themes at the same time.

See Also

See `setSliderColor` to update the color of your sliderInput.

Examples

```
if (interactive()) {

library(shiny)
library(shinyWidgets)

# With Modern design

ui <- fluidPage(
  chooseSliderSkin("Modern"),
  sliderInput("obs", "Customized single slider:",
              min = 0, max = 100, value = 50
  ),
  sliderInput("obs2", "Customized range slider:",
              min = 0, max = 100, value = c(40, 80)
  ),
  plotOutput("distPlot")
)

server <- function(input, output) {

  output$distPlot <- renderPlot({
    hist(rnorm(input$obs))
  })
```

```
}

shinyApp(ui, server)

# Use Flat design & a custom color

ui <- fluidPage(
  chooseSliderSkin("Flat", color = "#112446"),
  sliderInput("obs", "Customized single slider:",
              min = 0, max = 100, value = 50
  ),
  sliderInput("obs2", "Customized range slider:",
              min = 0, max = 100, value = c(40, 80)
  ),
  sliderInput("obs3", "An other slider:",
              min = 0, max = 100, value = 50
  ),
  plotOutput("distPlot")
)

server <- function(input, output) {

  output$distPlot <- renderPlot({
    hist(rnorm(input$obs))
  })
}

shinyApp(ui, server)

}
```

`circleButton` *Circle Action button*

Description

Create a rounded action button.

Usage

```
circleButton(inputId, icon = NULL, status = "default", size = "default", ...)
```

Arguments

`inputId`	The `input` slot that will be used to access the value.
`icon`	An icon to appear on the button.

status	Color of the button.
size	Size of the button : default, lg, sm, xs.
...	Named attributes to be applied to the button.

Examples

```
if (interactive()) {
  library(shiny)
  library(shinyWidgets)

  ui <- fluidPage(
    tags$h3("Rounded actionBution"),
    circleButton(inputId = "btn1", icon = icon("gear")),
    circleButton(
      inputId = "btn2",
      icon = icon("sliders"),
      status = "primary"
    ),
    verbatimTextOutput("res1"),
    verbatimTextOutput("res2")
  )

  server <- function(input, output, session) {

    output$res1 <- renderPrint({
      paste("value button 1:", input$btn1)
    })
    output$res2 <- renderPrint({
      paste("value button 2:", input$btn2)
    })

  }

  shinyApp(ui, server)
}
```

---

closeSweetAlert *Close Sweet Alert*

Description

Close Sweet Alert

Usage

```
closeSweetAlert(session = shiny::getDefaultReactiveDomain())
```

Arguments

session	The session object passed to function given to shinyServer.

colorSelectorInput *Color Selector Input*

Description

Choose between a restrictive set of colors.

Usage

```
colorSelectorInput(
  inputId,
  label,
  choices,
  selected = NULL,
  mode = c("radio", "checkbox"),
  display_label = FALSE,
  ncol = 10
)

colorSelectorExample()

colorSelectorDrop(
  inputId,
  label,
  choices,
  selected = NULL,
  display_label = FALSE,
  ncol = 10,
  circle = TRUE,
  size = "sm",
  up = FALSE,
  width = NULL
)
```

Arguments

inputId	The input slot that will be used to access the value.
label	Display label for the control, or NULL for no label.
choices	A list of colors, can be a list of named list, see example.
selected	Default selected color, if NULL the first color for mode = 'radio' and none for mode = 'checkbox'
mode	'radio' for only one choice, 'checkbox' for selecting multiple values.
display_label	Display list's names after palette of color.
ncol	If choices is not a list but a vector, go to line after n elements.
circle	Logical, use a circle or a square button

size	Size of the button : default, lg, sm, xs.
up	Logical. Display the dropdown menu above.
width	Width of the dropdown menu content.

Functions

- colorSelectorExample: Examples of use for colorSelectorInput
- colorSelectorDrop: Display a colorSelector in a dropdown button

Examples

```
if (interactive()) {

# Full example
colorSelectorExample()

# Simple example
ui <- fluidPage(
  colorSelectorInput(
    inputId = "mycolor1", label = "Pick a color :",
    choices = c("steelblue", "cornflowerblue",
                "firebrick", "palegoldenrod",
                "forestgreen")
  ),
  verbatimTextOutput("result1")
)

server <- function(input, output, session) {
  output$result1 <- renderPrint({
    input$mycolor1
  })
}

shinyApp(ui = ui, server = server)

}
```

---

currencyInput *Format Numeric Inputs*

Description

Shiny widgets for as-you-type formatting of currency and numeric values. For a more modifiable version see autonumericInput. These two functions do the exact same thing but are named differently for more intuitive use (currency for money, formatNumeric for percentage or other).

Usage

```
currencyInput(
  inputId,
  label,
  value,
  format = "euro",
  width = NULL,
  align = "center"
)

formatNumericInput(
  inputId,
  label,
  value,
  format = "commaDecimalCharDotSeparator",
  width = NULL,
  align = "center"
)
```

Arguments

inputId	The input slot that will be used to access the value.
label	Display label for the control, or NULL for no label.
value	Initial value (unformatted).
format	A character string specifying the currency format of the input. See "Details" for possible values.
width	The width of the input box, eg. "200px" or "100%".
align	The alignment of the text inside the input box, one of "center", "left", "right". Defaults to "center".

Details

In regards to format, there are currently 41 sets of predefined options that can be used, most of which are variations of one another. The most common are:

- "French"
- "Spanish"
- "NorthAmerican"
- "British"
- "Swiss"
- "Japanese"
- "Chinese"
- "Brazilian"
- "Turkish"

- "euro" (same as "French")
- "dollar" (same as "NorthAmerican")
- "percentageEU2dec"
- "percentageUS2dec"
- "dotDecimalCharCommaSeparator"
- "commaDecimalCharDotSeparator"

To see the full list please visit this section of the AutoNumeric Github Page.

Value

a currency input widget that can be added to the UI of a shiny app.

Examples

```
if (interactive()) {
  library(shiny)
  library(shinyWidgets)

  ui <- fluidPage(
    tags$h2("Currency Input"),

   currencyInput("id1", "Euro:", value = 1234, format = "euro", width = 200, align = "right"),
    verbatimTextOutput("res1"),

   currencyInput("id2", "Dollar:", value = 1234, format = "dollar", width = 200, align = "right"),
    verbatimTextOutput("res2"),

   currencyInput("id3", "Yen:", value = 1234, format = "Japanese", width = 200, align = "right"),
    verbatimTextOutput("res3"),

    br(),
    tags$h2("Formatted Numeric Input"),

    formatNumericInput("id4", "Numeric:", value = 1234, width = 200),
    verbatimTextOutput("res4"),

   formatNumericInput("id5", "Percent:", value = 1234, width = 200, format = "percentageEU2dec"),
    verbatimTextOutput("res5")
  )

  server <- function(input, output, session) {
```

```
    output$res1 <- renderPrint(input$id1)
    output$res2 <- renderPrint(input$id2)
    output$res3 <- renderPrint(input$id3)
    output$res4 <- renderPrint(input$id4)
    output$res5 <- renderPrint(input$id5)
  }

  shinyApp(ui, server)
}
```

---

demoAirDatepicker *Some examples on how to use airDatepickerInput*

Description

Some examples on how to use airDatepickerInput

Usage

```
demoAirDatepicker(example = "datepicker")
```

Arguments

example	Name of the example : "datepicker", "timepicker", "months", "years", "update".

Examples

```
if (interactive()) {

  demoAirDatepicker("datepicker")

}
```

---

demoNoUiSlider *Some examples on how to use noUiSliderInput*

Description

Some examples on how to use noUiSliderInput

Usage

```
demoNoUiSlider(example = "color")
```

Arguments

example	Name of the example : "color", "update", "behaviour", "more", "format".

Examples

```
if (interactive()) {

  demoNoUiSlider("color")

}
```

---

demoNumericRange *An example showing how numericRangeInput works*

Description

An example showing how numericRangeInput works

Usage

```
demoNumericRange()
```

Examples

```
if (interactive()) {

  demoNumericRange()

}
```

---

downloadBttn *Create a download* actionBttn

Description

Create a download button with actionBttn.

Usage

```
downloadBttn(
  outputId,
  label = "Download",
  style = "unite",
  color = "primary",
  size = "md",
  block = FALSE,
  no_outline = TRUE
)
```

Arguments

outputId	The name of the output slot that the downloadHandler is assigned to.
label	The label that should appear on the button.
style	Style of the button, to choose between simple, bordered, minimal, stretch, jelly, gradient, fill, material-circle, material-flat, pill, float, unite.
color	Color of the button : default, primary, warning, danger, success, royal.
size	Size of the button : xs,sm, md, lg.
block	Logical, full width button.
no_outline	Logical, don't show outline when navigating with keyboard/interact using mouse or touch.

Examples

```
if (interactive()) {

library(shiny)
library(shinyWidgets)

ui <- fluidPage(
  tags$h2("Download bttn"),
  downloadBttn(
    outputId = "downloadData",
    style = "bordered",
    color = "primary"
  )
)

server <- function(input, output, session) {

  output$downloadData <- downloadHandler(
    filename = function() {
      paste('data-', Sys.Date(), '.csv', sep='')
    },
    content = function(con) {
      write.csv(mtcars, con)
    }
  )

}

shinyApp(ui, server)

}
```

drop-menu-interaction *Interact with Drop Menu*

Description

Interact with Drop Menu

Usage

```
enableDropMenu(id, session = shiny::getDefaultReactiveDomain())

disableDropMenu(id, session = shiny::getDefaultReactiveDomain())

showDropMenu(id, session = shiny::getDefaultReactiveDomain())

hideDropMenu(id, session = shiny::getDefaultReactiveDomain())
```

Arguments

id	Drop menu ID, the tag's ID followed by "_dropmenu".
session	Shiny session.

Examples

```
if (interactive()) {
  library(shiny)
  library(shinyWidgets)

  ui <- fluidPage(
    tags$h2("Drop Menu interactions"),
    dropMenu(
      actionButton("myid", "See what's inside"),
      "Drop menu content",
      actionButton("hide", "Close menu"),
      position = "right middle"
    ),
    tags$br(),
    tags$p("Is drop menu opened?"),
    verbatimTextOutput("isOpen"),
    actionButton("show", "show menu"),
    tags$br(),
    tags$br(),
    dropMenu(
      actionButton("dontclose", "Only closeable from server"),
      "Drop menu content",
      actionButton("close", "Close menu"),
      position = "right middle",
      hideOnClick = FALSE
    )
```

```
  )

  server <- function(input, output, session) {

    output$isOpen <- renderPrint({
      input$myid_dropmenu
    })

    observeEvent(input$show, {
      showDropMenu("myid_dropmenu")
    })

    observeEvent(input$hide, {
      hideDropMenu("myid_dropmenu")
    })

    observeEvent(input$close, {
      hideDropMenu("dontclose_dropmenu")
    })

  }

  shinyApp(ui, server)
}
```

---

dropdown *Dropdown*

Description

Create a dropdown menu

Usage

```
dropdown(
  ...,
  style = "default",
  status = "default",
  size = "md",
  icon = NULL,
  label = NULL,
  tooltip = FALSE,
  right = FALSE,
  up = FALSE,
  width = NULL,
  animate = FALSE,
  inputId = NULL
)
```

Arguments

...	List of tag to be displayed into the dropdown menu.
style	Character. if default use Bootstrap button (like an actionButton), else use an actionBttn, see argument style (in actionBttn documentation) for possible values.
status	Add a class to the buttons, you can use Bootstrap status like 'info', 'primary', 'danger', 'warning' or 'success'. Or use an arbitrary strings to add a custom class, e.g. : with status = 'myClass', buttons will have class btn-myClass.
size	Size of the button : default, lg, sm, xs.
icon	An icon to appear on the button.
label	Label to appear on the button. If circle = TRUE and tooltip = TRUE, label is used in tooltip.
tooltip	Put a tooltip on the button, you can customize tooltip with tooltipOptions.
right	Logical. The dropdown menu starts on the right.
up	Logical. Display the dropdown menu above.
width	Width of the dropdown menu content.
animate	Add animation on the dropdown, can be logical or result of animateOptions.
inputId	Optional, id for the button, the button act like an actionButton, and you can use the id to toggle the dropdown menu server-side.

Details

This function is similar to dropdownButton but don't use Bootstrap, so you can put pickerInput in it. Moreover you can add animations on the appearance / disappearance of the dropdown with animate.css.

See Also

animateOptions for animation, tooltipOptions for tooltip and actionBttn for the button.

Examples

```
## Only run examples in interactive R sessions
if (interactive()) {

library("shiny")
library("shinyWidgets")

ui <- fluidPage(
  tags$h2("pickerInput in dropdown"),
  br(),
  dropdown(

    tags$h3("List of Input"),

    pickerInput(inputId = 'xcol2',
```

```
                label = 'X Variable',
                choices = names(iris),
                options = list(`style` = "btn-info")),

    pickerInput(inputId = 'ycol2',
                label = 'Y Variable',
                choices = names(iris),
                selected = names(iris)[[2]],
                options = list(`style` = "btn-warning")),

    sliderInput(inputId = 'clusters2',
                label = 'Cluster count',
                value = 3,
                min = 1, max = 9),

    style = "unite", icon = icon("gear"),
    status = "danger", width = "300px",
    animate = animateOptions(
      enter = animations$fading_entrances$fadeInLeftBig,
      exit = animations$fading_exits$fadeOutRightBig
    )
  ),

  plotOutput(outputId = 'plot2')
)

server <- function(input, output, session) {

  selectedData2 <- reactive({
    iris[, c(input$xcol2, input$ycol2)]
  })

  clusters2 <- reactive({
    kmeans(selectedData2(), input$clusters2)
  })

  output$plot2 <- renderPlot({
    palette(c("#E41A1C", "#377EB8", "#4DAF4A",
              "#984EA3", "#FF7F00", "#FFFF33",
              "#A65628", "#F781BF", "#999999"))

    par(mar = c(5.1, 4.1, 0, 1))
    plot(selectedData2(),
         col = clusters2()$cluster,
         pch = 20, cex = 3)
    points(clusters2()$centers, pch = 4, cex = 4, lwd = 4)
  })

}

shinyApp(ui = ui, server = server)

}
```

dropdownButton *Dropdown Button*

Description

Create a dropdown menu with Bootstrap where you can put input elements.

Usage

```
dropdownButton(
  ...,
  circle = TRUE,
  status = "default",
  size = "default",
  icon = NULL,
  label = NULL,
  tooltip = FALSE,
  right = FALSE,
  up = FALSE,
  width = NULL,
  margin = "10px",
  inline = FALSE,
  inputId = NULL
)
```

Arguments

...	List of tag to be displayed into the dropdown menu.
circle	Logical. Use a circle button
status	Add a class to the buttons, you can use Bootstrap status like 'info', 'primary', 'danger', 'warning' or 'success'. Or use an arbitrary strings to add a custom class, e.g. : with `status = 'myClass'`, buttons will have class `btn-myClass`.
size	Size of the button : default, lg, sm, xs.
icon	An icon to appear on the button.
label	Label to appear on the button. If circle = TRUE and tooltip = TRUE, label is used in tooltip.
tooltip	Put a tooltip on the button, you can customize tooltip with `tooltipOptions`.
right	Logical. The dropdown menu starts on the right.
up	Logical. Display the dropdown menu above.
width	Width of the dropdown menu content.
margin	Value of the dropdown margin-right and margin-left menu content.
inline	use an inline (`span()`) or block container (`div()`) for the output.
inputId	Optional, id for the button, the button act like an `actionButton`, and you can use the id to toggle the dropdown menu server-side with `toggleDropdownButton`.

Details

It is possible to know if a dropdown is open or closed server-side with `input$<inputId>_state`.

Note

`pickerInput` doesn't work inside `dropdownButton` because that's also a dropdown and you can't nest them. Instead use `dropdown`, it has similar features but is built differently so it works.

Examples

```
## Only run examples in interactive R sessions
if (interactive()) {

library(shiny)
library(shinyWidgets)

ui <- fluidPage(
  dropdownButton(
    inputId = "mydropdown",
    label = "Controls",
    icon = icon("sliders"),
    status = "primary",
    circle = FALSE,
    sliderInput(
      inputId = "n",
      label = "Number of observations",
      min = 10, max = 100, value = 30
    ),
    prettyToggle(
      inputId = "na",
      label_on = "NAs keeped",
      label_off = "NAs removed",
      icon_on = icon("check"),
      icon_off = icon("remove")
    )
  ),
  tags$div(style = "height: 140px;"), # spacing
  verbatimTextOutput(outputId = "out"),
  verbatimTextOutput(outputId = "state")
)

server <- function(input, output, session) {

  output$out <- renderPrint({
    cat(
      " # n\n", input$n, "\n",
      "# na\n", input$na
    )
  })

  output$state <- renderPrint({
    cat("Open:", input$mydropdown_state)
```

```
  })

}

shinyApp(ui, server)

}
```

---

dropMenu *Drop Menu*

Description

A pop-up menu to hide inputs and other elements into.

Usage

```
dropMenu(
  tag,
  ...,
  padding = "5px",
 placement = c("bottom", "bottom-start", "bottom-end", "top", "top-start", "top-end",
    "right", "right-start", "right-end", "left", "left-start", "left-end"),
  trigger = "click",
  arrow = TRUE,
  theme = c("light", "light-border", "material", "translucent"),
  hideOnClick = TRUE,
  maxWidth = "none",
  options = NULL
)
```

Arguments

tag	An HTML tag to which attach the menu.
...	UI elements to be displayed in the menu.
padding	Amount of padding to apply. Can be numeric (in pixels) or character (e.g. "3em").
placement	Positions of the menu relative to its reference element (tag).
trigger	The event(s) which cause the menu to show.
arrow	Determines if the menu has an arrow.
theme	CSS theme to use.
hideOnClick	Determines if the menu should hide if a mousedown event was fired outside of it (i.e. clicking on the reference element or the body of the page).
maxWidth	Determines the maximum width of the menu.
options	Additional options, see dropMenuOptions.

Value

A UI definition.

See Also

dropMenu interaction for functions and examples to interact with dropMenu from server.

Examples

```
if (interactive()) {
  library(shiny)
  library(shinyWidgets)

  ui <- fluidPage(
    tags$h3("drop example"),

    dropMenu(
      actionButton("go0", "See what"),
      tags$div(
        tags$h3("This is a dropdown"),
        tags$ul(
          tags$li("You can use HTML inside"),
          tags$li("Maybe Shiny inputs"),
          tags$li("And maybe outputs"),
          tags$li("and should work in markdown")
        )
      ),
      theme = "light-border",
      placement = "right",
      arrow = FALSE
    ),

    tags$br(),

    dropMenu(
      actionButton("go", "See what"),
      tags$h3("Some inputs"),
      sliderInput(
        "obs", "Number of observations:",
        min = 0, max = 1000, value = 500
      ),
      selectInput(
        "variable", "Variable:",
        c("Cylinders" = "cyl",
          "Transmission" = "am",
          "Gears" = "gear")
      ),
      pickerInput(
        inputId = "pckr",
        label = "Select all option",
        choices = rownames(mtcars),
```

```
      multiple = TRUE,
      options = list(`actions-box` = TRUE)
    ),
    radioButtons(
      "dist", "Distribution type:",
      c("Normal" = "norm",
        "Uniform" = "unif",
        "Log-normal" = "lnorm",
        "Exponential" = "exp")
    )
  ),
  verbatimTextOutput("slider"),
  verbatimTextOutput("select"),
  verbatimTextOutput("picker"),
  verbatimTextOutput("radio")
)

server <- function(input, output, session) {

  output$slider <- renderPrint(input$obs)
  output$select <- renderPrint(input$variable)
  output$picker <- renderPrint(input$pckr)
  output$radio <- renderPrint(input$dist)

}

shinyApp(ui, server)
}
```

`dropMenuOptions` *Drop menu options*

Description

Those options will passed to the underlying JavaScript library powering `dropMenu` : tippy.js. See all available options here https://atomiks.github.io/tippyjs/all-props/.

Usage

```
dropMenuOptions(duration = c(275, 250), animation = "fade", flip = FALSE, ...)
```

Arguments

`duration`	Duration of the CSS transition animation in ms.
`animation`	The type of transition animation.
`flip`	Determines if the tippy flips so that it is placed within the viewport as best it can be if there is not enough space.
`...`	Additional arguments.

Value

a `list` of options to be used in `dropMenu`.

`execute_safely` *Execute an expression safely in server*

Description

Execute an expression without generating an error, instead display the error to the user in an alert.

Usage

```
execute_safely(
  expr,
  title = "Error",
  message = "An error occured, detail below:",
  include_error = TRUE,
  error_return = NULL,
  session = shiny::getDefaultReactiveDomain()
)
```

Arguments

`expr`	Expression to evaluate
`title`	Title to display in the alert in case of error.
`message`	Message to display below title.
`include_error`	Include the error message generated by R.
`error_return`	Value to return in case of error.
`session`	Shiny session.

Value

Result of `expr` if no error, otherwise the value of `error_return` (`NULL` by default to use `req` in other `reactive` context).

Examples

```
library(shiny)
library(shinyWidgets)

ui <- fluidPage(
  tags$h2("Execute code safely in server"),
  fileInput(
    inputId = "file",
    label = "Try to import something else than a text file (Excel for example)"
  ),
```

```
  verbatimTextOutput(outputId = "file_value")
)

server <- function(input, output, session) {

  options(warn = 2) # turns warnings into errors
  onStop(function() {
    options(warn = 0)
  })

  r <- reactive({
    req(input$file)
    execute_safely(
      read.csv(input$file$datapath)
    )
  })

  output$file_value <- renderPrint({
    head(r())
  })

}

if (interactive())
  shinyApp(ui, server)
```

`html-dependencies` *HTML dependencies*

Description

These functions are used internally to load dependencies for widgets. Not all of them are exported. Below are the ones needed for package fresh.

Usage

```
html_dependency_awesome()

html_dependency_bttn()

html_dependency_pretty()

html_dependency_bsswitch()

html_dependency_sweetalert2(
  theme = c("sweetalert2", "minimal", "dark", "bootstrap-4", "material-ui", "bulma",
    "borderless")
)
```

Arguments

theme	SweetAlert theme to use.

Value

an htmlDependency.

Examples

```
# Use in UI or tags function

library(shiny)
fluidPage(
  html_dependency_awesome()
)
```

---

inputSweetAlert *Launch an input text dialog*

Description

Launch a popup with a text input

Usage

```
inputSweetAlert(
  session,
  inputId,
  title = NULL,
  text = NULL,
  type = NULL,
  input = c("text", "password", "textarea", "radio", "checkbox", "select"),
  inputOptions = NULL,
  inputPlaceholder = NULL,
  btn_labels = "Ok",
  btn_colors = NULL,
  reset_input = TRUE,
  ...
)
```

Arguments

session	The session object passed to function given to shinyServer.
inputId	The input slot that will be used to access the value. If in a Shiny module, it use same logic than inputs : use namespace in UI, not in server.

title	Title of the pop-up.
text	Text of the pop-up.
type	Type of the pop-up : "info", "success", "warning", "error" or "question".
input	Type of input, possible values are : "text", "password","textarea", "radio", "checkbox" or "select".
inputOptions	Options for the input. For "radio" and "select" it will be choices.
inputPlaceholder	Placeholder for the input, use it for "text" or "checkbox".
btn_labels	Label(s) for button(s).
btn_colors	Color(s) for button(s).
reset_input	Set the input value to NULL when alert is displayed.
...	Additional arguments (not used).

See Also

sendSweetAlert, confirmSweetAlert, closeSweetAlert.

Examples

```
if (interactive()) {
  library("shiny")
  library("shinyWidgets")

  ui <- fluidPage(
    tags$h1("Input sweet alert"),
    actionButton(inputId = "text", label = "Text Input"),
    verbatimTextOutput(outputId = "text"),
    actionButton(inputId = "password", label = "Password Input"),
    verbatimTextOutput(outputId = "password"),
    actionButton(inputId = "radio", label = "Radio Input"),
    verbatimTextOutput(outputId = "radio"),
    actionButton(inputId = "checkbox", label = "Checkbox Input"),
    verbatimTextOutput(outputId = "checkbox"),
    actionButton(inputId = "select", label = "Select Input"),
    verbatimTextOutput(outputId = "select")
  )
  server <- function(input, output, session) {

    observeEvent(input$text, {
      inputSweetAlert(
        session = session, inputId = "mytext", input = "text",
        title = "What's your name ?"
      )
    })
    output$text <- renderPrint(input$mytext)

    observeEvent(input$password, {
      inputSweetAlert(
```

```
      session = session, inputId = "mypassword", input = "password",
      title = "What's your password ?"
    )
  })
  output$password <- renderPrint(input$mypassword)

  observeEvent(input$radio, {
    inputSweetAlert(
      session = session, inputId = "myradio", input = "radio",
      inputOptions = c("Banana" , "Orange", "Apple"),
      title = "What's your favorite fruit ?"
    )
  })
  output$radio <- renderPrint(input$myradio)

  observeEvent(input$checkbox, {
    inputSweetAlert(
      session = session, inputId = "mycheckbox", input = "checkbox",
      inputPlaceholder = "Yes I agree",
      title = "Do you agree ?"
    )
  })
  output$checkbox <- renderPrint(input$mycheckbox)

  observeEvent(input$select, {
    inputSweetAlert(
      session = session, inputId = "myselect", input = "select",
      inputOptions = c("Banana" , "Orange", "Apple"),
      title = "What's your favorite fruit ?"
    )
  })
  output$select <- renderPrint(input$myselect)

}

shinyApp(ui = ui, server = server)
}
```

---

knobInput *Knob Input*

Description

Knob Input

Usage

```
knobInput(
  inputId,
  label,
```

```
  value,
  min = 0,
  max = 100,
  step = 1,
  angleOffset = 0,
  angleArc = 360,
  cursor = FALSE,
  thickness = NULL,
  lineCap = c("default", "round"),
  displayInput = TRUE,
  displayPrevious = FALSE,
  rotation = c("clockwise", "anticlockwise"),
  fgColor = NULL,
  inputColor = NULL,
  bgColor = NULL,
  pre = NULL,
  post = NULL,
  fontSize = NULL,
  readOnly = FALSE,
  skin = NULL,
  width = NULL,
  height = NULL,
  immediate = TRUE
)
```

Arguments

inputId	The input slot that will be used to access the value.
label	Display label for the control, or NULL for no label.
value	Initial value.
min	Minimum allowed value, default to 0.
max	Maximum allowed value, default to 100.
step	Specifies the interval between each selectable value, default to 1.
angleOffset	Starting angle in degrees, default to 0.
angleArc	Arc size in degrees, default to 360.
cursor	Display mode "cursor", don't work properly if width is not set in pixel, (TRUE or FALSE).
thickness	Gauge thickness, numeric value.
lineCap	Gauge stroke endings, 'default' or 'round'.
displayInput	Hide input in the middle of the knob (TRUE or FALSE).
displayPrevious	Display the previous value with transparency (TRUE or FALSE).
rotation	Direction of progression, 'clockwise' or 'anticlockwise'.
fgColor	Foreground color.

inputColor	Input value (number) color.
bgColor	Background color.
pre	A prefix string to put in front of the value.
post	A suffix string to put after the value.
fontSize	Font size, must be a valid CSS unit.
readOnly	Disable knob (TRUE or FALSE).
skin	Change Knob skin, only one option available : 'tron'.
width, height	The width and height of the input, e.g. 400px, or 100%. A value a pixel is recommended, otherwise the knob won't be able to initialize itself in some case (if hidden at start for example).
immediate	If TRUE (default), server-side value is updated each time value change, if FALSE value is updated when user release the widget.

Value

Numeric value server-side.

See Also

updateKnobInput for updating the value server-side.

Examples

```
if (interactive()) {

library("shiny")
library("shinyWidgets")

ui <- fluidPage(
  knobInput(
    inputId = "myKnob",
    label = "Display previous:",
    value = 50,
    min = -100,
    displayPrevious = TRUE,
    fgColor = "#428BCA",
    inputColor = "#428BCA"
  ),
  verbatimTextOutput(outputId = "res")
)

server <- function(input, output, session) {

  output$res <- renderPrint(input$myKnob)

}

shinyApp(ui = ui, server = server)

}
```

`materialSwitch` *Material Design Switch Input Control*

Description

A toggle switch to turn a selection on or off.

Usage

```
materialSwitch(
  inputId,
  label = NULL,
  value = FALSE,
  status = "default",
  right = FALSE,
  inline = FALSE,
  width = NULL
)
```

Arguments

`inputId`	The `input` slot that will be used to access the value.
`label`	Input label.
`value`	TRUE or FALSE.
`status`	Color, must be a valid Bootstrap status : default, primary, info, success, warning, danger.
`right`	Should the the label be on the right? default to FALSE.
`inline`	Display the input inline, if you want to place buttons next to each other.
`width`	The width of the input, e.g. '400px', or '100%'.

Value

A switch control that can be added to a UI definition.

See Also

`updateMaterialSwitch`, `switchInput`

Examples

```
if (interactive()) {
  library(shiny)
  library(shinyWidgets)

  ui <- fluidPage(
    tags$h3("Material switch examples"),
```

```
    materialSwitch(inputId = "switch1", label = "Night mode"),
    verbatimTextOutput("value1"),

    materialSwitch(inputId = "switch2", label = "Night mode", status = "danger"),
    verbatimTextOutput("value2")
  )
  server <- function(input, output) {

    output$value1 <- renderText({ input$switch1 })

    output$value2 <- renderText({ input$switch2 })

  }
  shinyApp(ui, server)
}
```

`multiInput` *Create a multiselect input control*

Description

A user-friendly replacement for select boxes with the multiple attribute

Usage

```
multiInput(
  inputId,
  label,
  choices = NULL,
  selected = NULL,
  options = NULL,
  width = NULL,
  choiceNames = NULL,
  choiceValues = NULL
)
```

Arguments

`inputId`	The `input` slot that will be used to access the value.
`label`	Display label for the control, or `NULL` for no label.
`choices`	List of values to select from.
`selected`	The initially selected value.
`options`	List of options passed to multi (`enable_search = FALSE` for disabling the search bar for example).
`width`	The width of the input, e.g. `400px`, or `100%`.
`choiceNames`	List of names to display to the user.
`choiceValues`	List of values corresponding to `choiceNames`.

Value

A multiselect control

See Also

updateMultiInput to update value server-side.

Examples

```
## Only run examples in interactive R sessions
if (interactive()) {

library("shiny")
library("shinyWidgets")

# simple use

ui <- fluidPage(
  multiInput(
    inputId = "id", label = "Fruits :",
    choices = c("Banana", "Blueberry", "Cherry",
                "Coconut", "Grapefruit", "Kiwi",
                "Lemon", "Lime", "Mango", "Orange",
                "Papaya"),
    selected = "Banana", width = "350px"
  ),
  verbatimTextOutput(outputId = "res")
)

server <- function(input, output, session) {
  output$res <- renderPrint({
    input$id
  })
}

shinyApp(ui = ui, server = server)

# with options

ui <- fluidPage(
  multiInput(
    inputId = "id", label = "Fruits :",
    choices = c("Banana", "Blueberry", "Cherry",
                "Coconut", "Grapefruit", "Kiwi",
                "Lemon", "Lime", "Mango", "Orange",
                "Papaya"),
    selected = "Banana", width = "400px",
    options = list(
      enable_search = FALSE,
      non_selected_header = "Choose between:",
```

```
      selected_header = "You have selected:"
    )
  ),
  verbatimTextOutput(outputId = "res")
)

server <- function(input, output, session) {
  output$res <- renderPrint({
    input$id
  })
}

shinyApp(ui = ui, server = server)

}
```

---

noUiSliderInput *Numeric range slider*

Description

A minimal numeric range slider with a lot of features.

Usage

```
noUiSliderInput(
  inputId,
  label = NULL,
  min,
  max,
  value,
  step = NULL,
  tooltips = TRUE,
  connect = TRUE,
  padding = 0,
  margin = NULL,
  limit = NULL,
  orientation = c("horizontal", "vertical"),
  direction = c("ltr", "rtl"),
  behaviour = "tap",
  range = NULL,
  pips = NULL,
  format = wNumbFormat(),
  update_on = c("end", "change"),
  color = NULL,
  inline = FALSE,
  width = NULL,
  height = NULL
)
```

Arguments

inputId	The input slot that will be used to access the value.
label	Display label for the control, or NULL for no label.
min	Minimal value that can be selected.
max	Maximal value that can be selected.
value	The initial value of the slider. as many cursors will be created as values provided.
step	numeric, by default, the slider slides fluently. In order to make the handles jump between intervals, you can use the step option.
tooltips	logical, display slider's value in a tooltip above slider.
connect	logical, vector of length value + 1, color slider between handle(s).
padding	numeric, padding limits how close to the slider edges handles can be.
margin	numeric, when using two handles, the minimum distance between the handles can be set using the margin option.
limit	numeric, the limit option is the opposite of the margin option, limiting the maximum distance between two handles.
orientation	The orientation setting can be used to set the slider to "vertical" or "horizontal".
direction	"ltr" or "rtl", By default the sliders are top-to-bottom and left-to-right, but you can change this using the direction option, which decides where the upper side of the slider is.
behaviour	Option to handle user interaction, a value or several between "drag", "tap", "fixed", "snap" or "none". See https://refreshless.com/nouislider/behaviour-option/ for more examples.
range	list, can be used to define non-linear sliders.
pips	list, used to generate points along the slider.
format	numbers format, see wNumbFormat.
update_on	When to send value to server: "end" (when slider is released) or "update" (each time value changes).
color	color in Hex format for the slider.
inline	If TRUE, it's possible to position sliders side-by-side.
width	The width of the input, e.g. 400px, or 100%.
height	The height of the input, e.g. 400px, or 100%.

Value

a ui definition

Note

See updateNoUiSliderInput for updating slider value server-side. And demoNoUiSlider for examples.

Examples

```
if (interactive()) {

### examples ----

# see ?demoNoUiSlider
demoNoUiSlider("more")

###  basic usage ----

library( shiny )
library( shinyWidgets )

ui <- fluidPage(

  tags$br(),

  noUiSliderInput(
    inputId = "noui1",
    min = 0, max = 100,
    value = 20
  ),
  verbatimTextOutput(outputId = "res1"),

  tags$br(),

  noUiSliderInput(
    inputId = "noui2", label = "Slider vertical:",
    min = 0, max = 1000, step = 50,
    value = c(100, 400), margin = 100,
    orientation = "vertical",
    width = "100px", height = "300px"
  ),
  verbatimTextOutput(outputId = "res2")

)

server <- function(input, output, session) {

  output$res1 <- renderPrint(input$noui1)
  output$res2 <- renderPrint(input$noui2)

}

shinyApp(ui, server)

}
```

numericInputIcon *Create a numeric input control with icon(s)*

Description

Extend form controls by adding text or icons before, after, or on both sides of a classic numericInput.

Usage

```
numericInputIcon(
  inputId,
  label,
  value,
  min = NULL,
  max = NULL,
  step = NULL,
  icon = NULL,
  size = NULL,
  help_text = NULL,
  width = NULL
)
```

Arguments

inputId	The input slot that will be used to access the value.
label	Display label for the control, or NULL for no label.
value	Initial value.
min	Minimum allowed value
max	Maximum allowed value
step	Interval to use when stepping between min and max
icon	An icon or a list, containing icons or text, to be displayed on the right or left of the numeric input.
size	Size of the input, default to NULL, can be "sm" (small) or "lg" (large).
help_text	Help text placed below the widget and only displayed if value entered by user is outside of min and max.
width	The width of the input, e.g. '400px', or '100%'; see validateCssUnit().

Value

A numeric input control that can be added to a UI definition.

Examples

```
if (interactive()) {
  library(shiny)
  library(shinyWidgets)

  ui <- fluidPage(

    output$res5 <- renderPrint(input$ex5)

  }

  shinyApp(ui, server)
}
```

`numericRangeInput` *Numeric Range Input*

Description

Create an input group of numeric inputs that function as a range input.

Usage

```
numericRangeInput(inputId, label, value, width = NULL, separator = " to ")
```

Arguments

`inputId`	The `input` slot that will be used to access the value.
`label`	Display label for the control, or `NULL` for no label.
`value`	The initial value(s) for the range. A numeric vector of length one will be duplicated to represent the minimum and maximum of the range; a numeric vector of two or more will have its minimum and maximum set the minimum and maximum of the range.
`width`	The width of the input, e.g. `'400px'`, or `'100%'`; see `validateCssUnit()`.
`separator`	String to display between the start and end input boxes.

Examples

```
if (interactive()) {

### examples ----

# see ?demoNumericRange
demoNumericRange()

###  basic usage ----

library( shiny )
library( shinyWidgets )
```

```
ui <- fluidPage(

  tags$br(),

  numericRangeInput(
    inputId = "noui1", label = "Numeric Range Input:",
    value = c(100, 400)
  ),
  verbatimTextOutput(outputId = "res1")

)

server <- function(input, output, session) {

  output$res1 <- renderPrint(input$noui1)

}

shinyApp(ui, server)

}
```

`pickerGroup-module` *Picker Group*

Description

Group of mutually dependent `pickerInput` for filtering `data.frame`'s columns.

Usage

```
pickerGroupUI(
  id,
  params,
  label = NULL,
  btn_label = "Reset filters",
  options = list(),
  inline = TRUE
)

pickerGroupServer(input, output, session, data, vars)
```

Arguments

`id`	Module's id.

params	A named list of parameters passed to each pickerInput, you can use : 'inputId' (obligatory, must be variable name), 'label', 'placeholder'.
label	Character, global label on top of all labels.
btn_label	Character, reset button label.
options	See pickerInput options argument.
inline	If TRUE (the default), pickerInputs are horizontally positioned, otherwise vertically.
input	standard shiny input.
output	standard shiny output.
session	standard shiny session.
data	a data.frame, or an object that can be coerced to data.frame.
vars	character, columns to use to create filters, must correspond to variables listed in params.

Value

a reactive function containing data filtered.

Examples

```
if (interactive()) {

library(shiny)
library(shinyWidgets)

data("mpg", package = "ggplot2")

ui <- fluidPage(
  fluidRow(
    column(
      width = 10, offset = 1,
      tags$h3("Filter data with picker group"),
      panel(
        pickerGroupUI(
          id = "my-filters",
          params = list(
            manufacturer = list(inputId = "manufacturer", label = "Manufacturer:"),
            model = list(inputId = "model", label = "Model:"),
            trans = list(inputId = "trans", label = "Trans:"),
            class = list(inputId = "class", label = "Class:")
          )
        ), status = "primary"
      ),
      DT::dataTableOutput(outputId = "table")
    )
  )
)
```

```
server <- function(input, output, session) {
  res_mod <- callModule(
    module = pickerGroupServer,
    id = "my-filters",
    data = mpg,
    vars = c("manufacturer", "model", "trans", "class")
  )
  output$table <- DT::renderDataTable(res_mod())
}

shinyApp(ui, server)

}

### Not inline example

if (interactive()) {

  library(shiny)
  library(shinyWidgets)

  data("mpg", package = "ggplot2")

  ui <- fluidPage(
    fluidRow(
      column(
        width = 4,
        tags$h3("Filter data with picker group"),
        pickerGroupUI(
          id = "my-filters",
          inline = FALSE,
          params = list(
            manufacturer = list(inputId = "manufacturer", label = "Manufacturer:"),
            model = list(inputId = "model", label = "Model:"),
            trans = list(inputId = "trans", label = "Trans:"),
            class = list(inputId = "class", label = "Class:")
          )
        )
      ),
      column(
        width = 8,
        DT::dataTableOutput(outputId = "table")
      )
    )
  )

  server <- function(input, output, session) {
    res_mod <- callModule(
      module = pickerGroupServer,
```

```
      id = "my-filters",
      data = mpg,
      vars = c("manufacturer", "model", "trans", "class")
    )
    output$table <- DT::renderDataTable(res_mod())
  }

  shinyApp(ui, server)

}
```

`pickerInput` *Select Picker Input Control*

Description

An alternative to `selectInput` with plenty of options to customize it.

Usage

```
pickerInput(
  inputId,
  label = NULL,
  choices,
  selected = NULL,
  multiple = FALSE,
  options = list(),
  choicesOpt = NULL,
  width = NULL,
  inline = FALSE
)
```

Arguments

`inputId`	The `input` slot that will be used to access the value.
`label`	Display label for the control, or `NULL` for no label.
`choices`	List of values to select from. If elements of the list are named then that name rather than the value is displayed to the user.
`selected`	The initially selected value (or multiple values if `multiple = TRUE`). If not specified then defaults to the first value for single-select lists and no values for multiple select lists.
`multiple`	Is selection of multiple items allowed?
`options`	List of options, see pickerOptions for all available options. To limit the number of selection possible, see example below.
`choicesOpt`	Options for choices in the dropdown menu.
`width`	The width of the input : 'auto', 'fit', '100px', '75%'.
`inline`	Put the label and the picker on the same line.

Value

A select control that can be added to a UI definition.

  shinyApp(ui, server)

}
```

pickerOptions *Options for 'pickerInput'*

Description

Wrapper of options available here: https://developer.snapappointments.com/bootstrap-select/options/

Usage

```
pickerOptions(
  actionsBox = NULL,
  container = NULL,
  countSelectedText = NULL,
  deselectAllText = NULL,
  dropdownAlignRight = NULL,
  dropupAuto = NULL,
  header = NULL,
  hideDisabled = NULL,
  iconBase = NULL,
  liveSearch = NULL,
  liveSearchNormalize = NULL,
  liveSearchPlaceholder = NULL,
  liveSearchStyle = NULL,
  maxOptions = NULL,
  maxOptionsText = NULL,
  mobile = NULL,
  multipleSeparator = NULL,
  noneSelectedText = NULL,
  noneResultsText = NULL,
  selectAllText = NULL,
  selectedTextFormat = NULL,
  selectOnTab = NULL,
  showContent = NULL,
  showIcon = NULL,
  showSubtext = NULL,
  showTick = NULL,
  size = NULL,
  style = NULL,
  tickIcon = NULL,
  title = NULL,
  virtualScroll = NULL,
  width = NULL,
  windowPadding = NULL,
  ...
)
```

Arguments

actionsBox	When set to true, adds two buttons to the top of the dropdown menu (Select All & Deselect All). Type: boolean; Default: false.
container	When set to a string, appends the select to a specific element or selector, e.g., container: 'body' | '.main-body' Type: string | false; Default: false.
countSelectedText	Sets the format for the text displayed when selectedTextFormat is count or count > #. 0 is the selected amount. 1 is total available for selection. When set to a function, the first parameter is the number of selected options, and the second is the total number of options. The function must return a string. Type: string | function; Default: function.
deselectAllText	The text on the button that deselects all options when actionsBox is enabled. Type: string; Default: 'Deselect All'.
dropdownAlignRight	Align the menu to the right instead of the left. If set to 'auto', the menu will automatically align right if there isn't room for the menu's full width when aligned to the left. Type: boolean | 'auto'; Default: false.
dropupAuto	checks to see which has more room, above or below. If the dropup has enough room to fully open normally, but there is more room above, the dropup still opens normally. Otherwise, it becomes a dropup. If dropupAuto is set to false, dropups must be called manually. Type: boolean; Default: true.
header	adds a header to the top of the menu; includes a close button by default Type: string; Default: false.
hideDisabled	removes disabled options and optgroups from the menu data-hide-disabled: true Type: boolean; Default: false.
iconBase	Set the base to use a different icon font instead of Glyphicons. If changing iconBase, you might also want to change tickIcon, in case the new icon font uses a different naming scheme. Type: string; Default: 'glyphicon'.
liveSearch	When set to true, adds a search box to the top of the selectpicker dropdown. Type: boolean; Default: false.
liveSearchNormalize	Setting liveSearchNormalize to true allows for accent-insensitive searching. Type: boolean; Default: false.
liveSearchPlaceholder	When set to a string, a placeholder attribute equal to the string will be added to the liveSearch input. Type: string; Default: null.
liveSearchStyle	When set to 'contains', searching will reveal options that contain the searched text. For example, searching for pl with return both Apple, Plum, and Plantain. When set to 'startsWith', searching for pl will return only Plum and Plantain. Type: string; Default: 'contains'.
maxOptions	When set to an integer and in a multi-select, the number of selected options cannot exceed the given value. This option can also exist as a data-attribute for an <optgroup>, in which case it only applies to that <optgroup>. Type: integer | false; Default: false.

`maxOptionsText` The text that is displayed when maxOptions is enabled and the maximum number of options for the given scenario have been selected. If a function is used, it must return an array. array[0] is the text used when maxOptions is applied to the entire select element. array[1] is the text used when maxOptions is used on an optgroup. If a string is used, the same text is used for both the element and the optgroup. Type: string | array | function; Default: function.

`mobile` When set to true, enables the device's native menu for select menus. Type: boolean; Default: false.

`multipleSeparator`
Set the character displayed in the button that separates selected options. Type: string; Default: ', '.

`noneSelectedText`
The text that is displayed when a multiple select has no selected options. Type: string; Default: 'Nothing selected'.

`noneResultsText`
The text displayed when a search doesn't return any results. Type: string; Default: 'No results matched 0'.

`selectAllText` The text on the button that selects all options when actionsBox is enabled. Type: string; Default: 'Select All'.

`selectedTextFormat`
Specifies how the selection is displayed with a multiple select. 'values' displays a list of the selected options (separated by multipleSeparator. 'static' simply displays the select element's title. 'count' displays the total number of selected options. 'count > x' behaves like 'values' until the number of selected options is greater than x; after that, it behaves like 'count'. Type: 'values' | 'static' | 'count' | 'count > x' (where x is an integer); Default: 'values'.

`selectOnTab` When set to true, treats the tab character like the enter or space characters within the selectpicker dropdown. Type: boolean; Default: false.

`showContent` When set to true, display custom HTML associated with selected option(s) in the button. When set to false, the option value will be displayed instead. Type: boolean; Default: true.

`showIcon` When set to true, display icon(s) associated with selected option(s) in the button. Type: boolean; Default: true.

`showSubtext` When set to true, display subtext associated with a selected option in the button. Type: boolean; Default: false.

`showTick` Show checkmark on selected option (for items without multiple attribute). Type: boolean; Default: false.

`size` When set to 'auto', the menu always opens up to show as many items as the window will allow without being cut off. When set to an integer, the menu will show the given number of items, even if the dropdown is cut off. When set to false, the menu will always show all items. Type: 'auto' | integer | false; Default: 'auto'.

`style` When set to a string, add the value to the button's style. Type: string | null; Default: null.

`tickIcon`	Set which icon to use to display as the "tick" next to selected options. Type: string; Default: 'glyphicon-ok'.
`title`	The default title for the selectpicker. Type: string | null; Default: null.
`virtualScroll`	If enabled, the items in the dropdown will be rendered using virtualization (i.e. only the items that are within the viewport will be rendered). This drastically improves performance for selects with a large number of options. Set to an integer to only use virtualization if the select has at least that number of options. Type: boolean | integer; Default: 600.
`width`	When set to auto, the width of the selectpicker is automatically adjusted to accommodate the widest option. When set to a css-width, the width of the selectpicker is forced inline to the given value. When set to false, all width information is removed. Type: 'auto' | 'fit' | css-width | false (where css-width is a CSS width with units, e.g. 100px); Default: false.
`windowPadding`	This is useful in cases where the window has areas that the dropdown menu should not cover - for instance a fixed header. When set to an integer, the same padding will be added to all sides. Alternatively, an array of integers can be used in the format [top, right, bottom, left]. Type: integer | array; Default: 0.
`...`	Other options not listed here.

Note

Documentation is from Bootstrap-select page (https://developer.snapappointments.com/bootstrap-select/options/).

Examples

```
if (interactive()) {
  library(shiny)
  library(shinyWidgets)

  ui <- fluidPage(
    pickerInput(
      inputId = "month",
      label = "Select a month",
      choices = month.name,
      multiple = TRUE,
      options = pickerOptions(
        actionsBox = TRUE,
        title = "Please select a month",
        header = "This is a title"
      )
    )
  )

  server <- function(input, output, session) {

  }
```

```
  shinyApp(ui, server)
}
```

---

prettyCheckbox *Pretty Checkbox Input*

Description

Create a pretty checkbox that can be used to specify logical values.

Usage

```
prettyCheckbox(
  inputId,
  label,
  value = FALSE,
  status = "default",
  shape = c("square", "curve", "round"),
  outline = FALSE,
  fill = FALSE,
  thick = FALSE,
  animation = NULL,
  icon = NULL,
  plain = FALSE,
  bigger = FALSE,
  inline = FALSE,
  width = NULL
)
```

Arguments

inputId	The input slot that will be used to access the value.
label	Display label for the control.
value	Initial value (TRUE or FALSE).
status	Add a class to the checkbox, you can use Bootstrap status like 'info', 'primary', 'danger', 'warning' or 'success'.
shape	Shape of the checkbox between square, curve and round.
outline	Color also the border of the checkbox (TRUE or FALSE).
fill	Fill the checkbox with color (TRUE or FALSE).
thick	Make the content inside checkbox smaller (TRUE or FALSE).
animation	Add an animation when checkbox is checked, a value between smooth, jelly, tada, rotate, pulse.
icon	Optional, display an icon on the checkbox, must be an icon created with icon.

plain	Remove the border when checkbox is checked (TRUE or FALSE).
bigger	Scale the checkboxes a bit bigger (TRUE or FALSE).
inline	Display the input inline, if you want to place checkboxes next to each other.
width	The width of the input, e.g. 400px, or 100%.

Value

TRUE or FALSE server-side.

Note

Due to the nature of different checkbox design, certain animations are not applicable in some arguments combinations. You can find examples on the pretty-checkbox official page : https://lokesh-coder.github.io/pretty-checkbox/.

See Also

See updatePrettyCheckbox to update the value server-side. See prettySwitch and prettyToggle for similar widgets.

Examples

```
library(shiny)
library(shinyWidgets)

ui <- fluidPage(
  tags$h1("Pretty checkbox"),
  br(),

  fluidRow(
    column(
      width = 4,

`prettyCheckboxGroup` *Pretty Checkbox Group Input Control*

Description

Create a group of pretty checkboxes that can be used to toggle multiple choices independently. The server will receive the input as a character vector of the selected values.

Usage

```
prettyCheckboxGroup(
  inputId,
  label,
  choices = NULL,
  selected = NULL,
  status = "default",
  shape = c("square", "curve", "round"),
  outline = FALSE,
  fill = FALSE,
  thick = FALSE,
  animation = NULL,
  icon = NULL,
  plain = FALSE,
  bigger = FALSE,
  inline = FALSE,
  width = NULL,
  choiceNames = NULL,
  choiceValues = NULL
)
```

Arguments

`inputId`	The `input` slot that will be used to access the value.
`label`	Display label for the control.
`choices`	List of values to show checkboxes for. If elements of the list are named then that name rather than the value is displayed to the user. If this argument is provided, then `choiceNames` and `choiceValues` must not be provided, and vice-versa. The values should be strings; other types (such as logicals and numbers) will be coerced to strings.
`selected`	The values that should be initially selected, if any.

status	Add a class to the checkbox, you can use Bootstrap status like 'info', 'primary', 'danger', 'warning' or 'success'.
shape	Shape of the checkbox between square, curve and round.
outline	Color also the border of the checkbox (TRUE or FALSE).
fill	Fill the checkbox with color (TRUE or FALSE).
thick	Make the content inside checkbox smaller (TRUE or FALSE).
animation	Add an animation when checkbox is checked, a value between smooth, jelly, tada, rotate, pulse.
icon	Optional, display an icon on the checkbox, must be an icon created with icon.
plain	Remove the border when checkbox is checked (TRUE or FALSE).
bigger	Scale the checkboxes a bit bigger (TRUE or FALSE).
inline	If TRUE, render the choices inline (i.e. horizontally).
width	The width of the input, e.g. 400px, or 100%.
choiceNames	List of names to display to the user.
choiceValues	List of values corresponding to choiceNames

Value

A character vector or NULL server-side.

See Also

updatePrettyCheckboxGroup for updating values server-side.

Examples

```
library(shiny)
library(shinyWidgets)

ui <- fluidPage(
  tags$h1("Pretty checkbox group"),
  br(),

  fluidRow(
    column(
      width = 4,
      prettyCheckboxGroup(
        inputId = "checkgroup1",

```

`prettyRadioButtons` *Pretty radio Buttons Input Control*

Description

Create a set of radio buttons used to select an item from a list.

Usage

```
prettyRadioButtons(
  inputId,
  label,
  choices = NULL,
  selected = NULL,
  status = "primary",
  shape = c("round", "square", "curve"),
  outline = FALSE,
  fill = FALSE,
  thick = FALSE,
  animation = NULL,
  icon = NULL,
  plain = FALSE,
  bigger = FALSE,
  inline = FALSE,
  width = NULL,
  choiceNames = NULL,
  choiceValues = NULL
)
```

Arguments

`inputId`	The `input` slot that will be used to access the value.
`label`	Display label for the control.
`choices`	List of values to show radio buttons for. If elements of the list are named then that name rather than the value is displayed to the user. If this argument is provided, then `choiceNames` and `choiceValues` must not be provided, and vice-versa. The values should be strings; other types (such as logicals and numbers) will be coerced to strings.
`selected`	The values that should be initially selected, (if not specified then defaults to the first value).

status	Add a class to the radio, you can use Bootstrap status like 'info', 'primary', 'danger', 'warning' or 'success'.
shape	Shape of the radio between square, curve and round.
outline	Color also the border of the radio (TRUE or FALSE).
fill	Fill the radio with color (TRUE or FALSE).
thick	Make the content inside radio smaller (TRUE or FALSE).
animation	Add an animation when radio is checked, a value between smooth, jelly, tada, rotate, pulse.
icon	Optional, display an icon on the radio, must be an icon created with icon.
plain	Remove the border when radio is checked (TRUE or FALSE).
bigger	Scale the radio a bit bigger (TRUE or FALSE).
inline	If TRUE, render the choices inline (i.e. horizontally).
width	The width of the input, e.g. 400px, or 100%.
choiceNames	List of names to display to the user.
choiceValues	List of values corresponding to choiceNames

Value

A character vector or NULL server-side.

Examples

```
library(shiny)
library(shinyWidgets)

ui <- fluidPage(
  tags$h1("Pretty radio buttons"),
  br(),

  fluidRow(
    column(
      width = 4,
      prettyRadioButtons(
        inputId = "radio1",
        label = "Click me!",
        choices = c("Click me !", "Me !", "Or me !")
      ),
      verbatimTextOutput(outputId = "res1"),
      br(),
      prettyRadioButtons(
        inputId = "radio4",
        label = "Click me!",
        choices = c("Click me !", "Me !", "Or me !"),
        outline = TRUE,
        plain = TRUE,
        icon = icon("thumbs-up")
      ),
```

```
      verbatimTextOutput(outputId = "res4")
    ),
    column(
      width = 4,
      prettyRadioButtons(
        inputId = "radio2",
        label = "Click me!",
        thick = TRUE,
        choices = c("Click me !", "Me !", "Or me !"),
        animation = "pulse",
        status = "info"
      ),
      verbatimTextOutput(outputId = "res2"),
      br(),
      prettyRadioButtons(
        inputId = "radio5",
        label = "Click me!",
        icon = icon("check"),
        choices = c("Click me !", "Me !", "Or me !"),
        animation = "tada",
        status = "default"
      ),
      verbatimTextOutput(outputId = "res5")
    ),
    column(
      width = 4,
      prettyRadioButtons(
        inputId = "radio3",
        label = "Click me!",
        choices = c("Click me !", "Me !", "Or me !"),
        shape = "round",
        status = "danger",
        fill = TRUE,
        inline = TRUE
      ),
      verbatimTextOutput(outputId = "res3")
    )
  )

)

server <- function(input, output, session) {

  output$res4 <- renderPrint(input$radio4)
  output$res5 <- renderPrint(input$radio5)

}

if (interactive())
  shinyApp(ui, server)
```

prettySwitch *Pretty Switch Input*

Description

A toggle switch to replace checkbox

Usage

```
prettySwitch(
  inputId,
  label,
  value = FALSE,
  status = "default",
  slim = FALSE,
  fill = FALSE,
  bigger = FALSE,
  inline = FALSE,
  width = NULL
)
```

Arguments

inputId	The input slot that will be used to access the value.
label	Display label for the control, or NULL for no label.
value	Initial value (TRUE or FALSE).
status	Add a class to the switch, you can use Bootstrap status like 'info', 'primary', 'danger', 'warning' or 'success'.
slim	Change the style of the switch (TRUE or FALSE), see examples.
fill	Change the style of the switch (TRUE or FALSE), see examples.
bigger	Scale the switch a bit bigger (TRUE or FALSE).
inline	Display the input inline, if you want to place switch next to each other.
width	The width of the input, e.g. 400px, or 100%.

Value

TRUE or FALSE server-side.

Note

Appearance is better in a browser such as Chrome than in RStudio Viewer

See Also

See updatePrettySwitch to update the value server-side.

Examples

```
library(shiny)
library(shinyWidgets)

ui <- fluidPage(
  tags$h1("Pretty switches"),
  br(),

  fluidRow(
    column(
      width = 4,
      prettySwitch(inputId = "switch1", label = "Default:"),
      verbatimTextOutput(outputId = "res1"),
      br(),
      prettySwitch(
        inputId = "switch4",
        label = "Fill switch with status:",
        fill = TRUE, status = "primary"
      ),
      verbatimTextOutput(outputId = "res4")
    ),
    column(
      width = 4,
      prettySwitch(
        inputId = "switch2",
        label = "Danger status:",
        status = "danger"
      ),
      verbatimTextOutput(outputId = "res2")
    ),
    column(
      width = 4,
      prettySwitch(
        inputId = "switch3",
        label = "Slim switch:",
        slim = TRUE
      ),
      verbatimTextOutput(outputId = "res3")
    )
  )

)

server <- function(input, output, session) {

  output$res1 <- renderPrint(input$switch1)

  output$res3 <- renderPrint(input$switch3)
  output$res4 <- renderPrint(input$switch4)

}
```

```
if (interactive())
  shinyApp(ui, server)
```

---

prettyToggle *Pretty Toggle Input*

Description

A single checkbox that changes appearance if checked or not.

Usage

```
prettyToggle(
  inputId,
  label_on,
  label_off,
  icon_on = NULL,
  icon_off = NULL,
  value = FALSE,
  status_on = "success",
  status_off = "danger",
  shape = c("square", "curve", "round"),
  outline = FALSE,
  fill = FALSE,
  thick = FALSE,
  plain = FALSE,
  bigger = FALSE,
  animation = NULL,
  inline = FALSE,
  width = NULL
)
```

Arguments

inputId	The input slot that will be used to access the value.
label_on	Display label for the control when value is TRUE.
label_off	Display label for the control when value is FALSE
icon_on	Optional, display an icon on the checkbox when value is TRUE, must be an icon created with icon.
icon_off	Optional, display an icon on the checkbox when value is FALSE, must be an icon created with icon.
value	Initial value (TRUE or FALSE).
status_on	Add a class to the checkbox when value is TRUE, you can use Bootstrap status like 'info', 'primary', 'danger', 'warning' or 'success'.

status_off	Add a class to the checkbox when value is FALSE, you can use Bootstrap status like 'info', 'primary', 'danger', 'warning' or 'success'.
shape	Shape of the checkbox between square, curve and round.
outline	Color also the border of the checkbox (TRUE or FALSE).
fill	Fill the checkbox with color (TRUE or FALSE).
thick	Make the content inside checkbox smaller (TRUE or FALSE).
plain	Remove the border when checkbox is checked (TRUE or FALSE).
bigger	Scale the checkboxes a bit bigger (TRUE or FALSE).
animation	Add an animation when checkbox is checked, a value between smooth, jelly, tada, rotate, pulse.
inline	Display the input inline, if you want to place checkboxes next to each other.
width	The width of the input, e.g. 400px, or 100%.

Value

TRUE or FALSE server-side.

See Also

progress-bar *Progress Bars*

Description

Create a progress bar to provide feedback on calculation.

Usage

```
progressBar(
  id,
  value,
  total = NULL,
  display_pct = FALSE,
  size = NULL,
  status = NULL,
  striped = FALSE,
  title = NULL,
  range_value = NULL,
  unit_mark = "%"
)

updateProgressBar(
  session,
  id,
  value,
  total = NULL,
  title = NULL,
  status = NULL,
  range_value = NULL,
  unit_mark = "%"
)
```

Arguments

id	An id used to update the progress bar. If in a Shiny module, it use same logic than inputs : use namespace in UI, not in server.
value	Value of the progress bar between 0 and 100, if >100 you must provide total.
total	Used to calculate percentage if value > 100, force an indicator to appear on top right of the progress bar.
display_pct	logical, display percentage on the progress bar.
size	Size, 'NULL' by default or a value in 'xxs', 'xs', 'sm', only work with package 'shinydashboard'.
status	Color, must be a valid Bootstrap status : primary, info, success, warning, danger.
striped	logical, add a striped effect.
title	character, optional title.
range_value	Default is to display percentage (`[0,100]`), but you can specify a custom range, e.g. `-50,50`.
unit_mark	Unit for value displayed on the progress bar, default to `"%"`.
session	The 'session' object passed to function given to shinyServer.

Value

A progress bar that can be added to a UI definition.

  observeEvent(input$up1, {
    updateProgressBar(
      session = session,
      id = "pb1",
      value = input$up1
    )
  })
  observeEvent(input$go, {
    for (i in 1:100) {
```

```
      updateProgressBar(
        session = session,
        id = "pb2",
        value = i, total = 100,
        title = paste("Process", trunc(i/10))
      )
      Sys.sleep(0.1)
    }
  })
}

shinyApp(ui = ui, server = server)

}
```

`progressSweetAlert` *Progress bar in a sweet alert*

Description

Progress bar in a sweet alert

Usage

```
progressSweetAlert(
  session,
  id,
  value,
  total = NULL,
  display_pct = FALSE,
  size = NULL,
  status = NULL,
  striped = FALSE,
  title = NULL
)
```

Arguments

`session`	The `session` object passed to function given to shinyServer.
`id`	An id used to update the progress bar.
`value`	Value of the progress bar between 0 and 100, if >100 you must provide total.
`total`	Used to calculate percentage if value > 100, force an indicator to appear on top right of the progress bar.
`display_pct`	logical, display percentage on the progress bar.
`size`	Size, 'NULL' by default or a value in 'xxs', 'xs', 'sm', only work with package 'shinydashboard'.

status	Color, must be a valid Bootstrap status : primary, info, success, warning, danger.
striped	logical, add a striped effect.
title	character, optional title.

Examples

```
if (interactive()) {

library("shiny")
library("shinyWidgets")

ui <- fluidPage(
  tags$h1("Progress bar in Sweet Alert"),
  useSweetAlert(), # /!\ needed with 'progressSweetAlert'
  actionButton(

  observeEvent(input$go, {
    progressSweetAlert(
      session = session, id = "myprogress",
      title = "Work in progress",
      display_pct = TRUE, value = 0
    )
    for (i in seq_len(50)) {
      Sys.sleep(0.1)
      updateProgressBar(
        session = session,
        id = "myprogress",
         value = i*2
      )
    }
    closeSweetAlert(session = session)
    sendSweetAlert(
      session = session,
      title =" Calculation completed !",
      type = "success"
    )
  })

}

shinyApp(ui = ui, server = server)

}
```

`radioGroupButtons` *Buttons Group Radio Input Control*

Description

Create buttons grouped that act like radio buttons.

Usage

```
radioGroupButtons(
  inputId,
  label = NULL,
  choices = NULL,
  selected = NULL,
  status = "default",
  size = "normal",
  direction = "horizontal",
  justified = FALSE,
  individual = FALSE,
  checkIcon = list(),
  width = NULL,
  choiceNames = NULL,
  choiceValues = NULL,
  disabled = FALSE
)
```

Arguments

`inputId`	The `input` slot that will be used to access the value.
`label`	Input label.
`choices`	List of values to select from (if elements of the list are named then that name rather than the value is displayed to the user).
`selected`	The initially selected value.
`status`	Add a class to the buttons, you can use Bootstrap status like 'info', 'primary', 'danger', 'warning' or 'success'. Or use an arbitrary strings to add a custom class, e.g. : with `status = 'myClass'`, buttons will have class `btn-myClass`.
`size`	Size of the buttons ('xs', 'sm', 'normal', 'lg')
`direction`	Horizontal or vertical
`justified`	If TRUE, fill the width of the parent div
`individual`	If TRUE, buttons are separated.
`checkIcon`	A list, if no empty must contain at least one element named 'yes' corresponding to an icon to display if the button is checked.
`width`	The width of the input, e.g. '400px', or '100%'.

`choiceNames, choiceValues`
: Same as in `radioButtons`. List of names and values, respectively, that are displayed to the user in the app and correspond to the each choice (for this reason, `choiceNames` and `choiceValues` must have the same length).

`disabled`
: Initialize buttons in a disabled state (users won't be able to select a value).

Value

A buttons group control that can be added to a UI definition.

See Also

`updateRadioGroupButtons`

Examples

```
if (interactive()) {

  ui <- fluidPage(
    tags$h1("radioGroupButtons examples"),

    radioGroupButtons(
      inputId = "somevalue1",
      label = "Make a choice: ",
      choices = c("A", "B", "C")
    ),
    verbatimTextOutput("value1"),

    radioGroupButtons(
      inputId = "somevalue2",
      label = "With custom status:",
      choices = names(iris),
      status = "primary"
    ),
    verbatimTextOutput("value2"),

    radioGroupButtons(
      inputId = "somevalue3",
      label = "With icons:",
      choices = names(mtcars),
      checkIcon = list(
        yes = icon("check-square"),
        no = icon("square-o")
      )
    ),
    verbatimTextOutput("value3")
  )
  server <- function(input, output) {

    output$value1 <- renderPrint({ input$somevalue1 })
    output$value2 <- renderPrint({ input$somevalue2 })
    output$value3 <- renderPrint({ input$somevalue3 })
```

```
  }
  shinyApp(ui, server)

}
```

`searchInput` *Search Input*

Description

A text input only triggered when Enter key is pressed or search button clicked

Usage

```
searchInput(
  inputId,
  label = NULL,
  value = "",
  placeholder = NULL,
  btnSearch = NULL,
  btnReset = NULL,
  resetValue = "",
  width = NULL
)
```

Arguments

`inputId`	The input slot that will be used to access the value.
`label`	Display label for the control, or NULL for no label.
`value`	Initial value.
`placeholder`	A character string giving the user a hint as to what can be entered into the control.
`btnSearch`	An icon for the button which validate the search.
`btnReset`	An icon for the button which reset the search.
`resetValue`	Value used when reset button is clicked, default to `""`, if `NULL` value is not reset.
`width`	The width of the input, e.g. '400px', or '100%'.

Note

The two buttons ('search' and 'reset') act like `actionButton`, you can retrieve their value server-side with `input$<INPUTID>_search` and `input$<INPUTID>_reset`.

See Also

updateSearchInput to update value server-side.

Examples

```
if (interactive()) {
  ui <- fluidPage(
    tags$h1("Search Input"),
    br(),
    searchInput(
      inputId = "search", label = "Enter your text",
      placeholder = "A placeholder",
      btnSearch = icon("search"),
      btnReset = icon("remove"),
      width = "450px"
    ),
    br(),
    verbatimTextOutput(outputId = "res")
  )

  server <- function(input, output, session) {
    output$res <- renderPrint({
      input$search
    })
  }

  shinyApp(ui = ui, server = server)
}
```

---

selectizeGroup-module *Selectize Group*

Description

Group of mutually dependent ‘selectizeInput‘ for filtering data.frame’s columns (like in Excel).

Usage

```
selectizeGroupUI(
  id,
  params,
  label = NULL,
  btn_label = "Reset filters",
  inline = TRUE
)

selectizeGroupServer(input, output, session, data, vars)
```

Arguments

id	Module’s id.

params	A named list of parameters passed to each 'selectizeInput', you can use : 'inputId' (obligatory, must be variable name), 'label', 'placeholder'.
label	Character, global label on top of all labels.
btn_label	Character, reset button label.
inline	If TRUE (the default), 'selectizeInput's are horizontally positioned, otherwise vertically.
input, output, session	standards shiny server arguments.
data	Either a data.frame or a reactive function returning a data.frame (do not use parentheses).
vars	character, columns to use to create filters, must correspond to variables listed in params. Can be a reactive function, but values must be included in the initial ones (in params).

Value

a reactive function containing data filtered.

Examples

```
# Default ------------------------------------------------------------------

if (interactive()) {

  library(shiny)
  library(shinyWidgets)

  data("mpg", package = "ggplot2")

  ui <- fluidPage(
    fluidRow(
      column(
        width = 10, offset = 1,
        tags$h3("Filter data with selectize group"),
        panel(
          selectizeGroupUI(
            id = "my-filters",
            params = list(
              manufacturer = list(inputId = "manufacturer", title = "Manufacturer:"),
              model = list(inputId = "model", title = "Model:"),
              trans = list(inputId = "trans", title = "Trans:"),
              class = list(inputId = "class", title = "Class:")
            )
          ), status = "primary"
        ),
        DT::dataTableOutput(outputId = "table")
      )
    )
  )
```

```
  server <- function(input, output, session) {

              class = list(inputId = "class", title = "Class:")
            )
          ),
```

```
          status = "primary"
        ),
        DT::dataTableOutput(outputId = "table")
      )
    )
  )

  server <- function(input, output, session) {

    mpg_filter <- reactive({
      subset(mpg, manufacturer %in% input$car_select)
    })

    res_mod <- callModule(
      module = selectizeGroupServer,
      id = "my-filters",
      data = mpg_filter,
      vars = c("manufacturer", "model", "trans", "class")
    )

    output$table <- DT::renderDataTable({
      req(res_mod())
      res_mod()
    })
  }

  shinyApp(ui, server)
}
```

`setBackgroundColor` *Custom background color for your shinyapp*

Description

Allow to change the background color of your shiny application.

Usage

```
setBackgroundColor(
  color = "ghostwhite",
  gradient = c("linear", "radial"),
  direction = c("bottom", "top", "right", "left"),
  shinydashboard = FALSE
)
```

Arguments

`color`	Background color. Use either the fullname or the Hex code (https://www.w3schools.com/colors/colors_hex.asp). If more than one color is used, a gradient background is set.

gradient	Type of gradient: linear or radial.
direction	Direction for gradient, by default to bottom. Possibles choices are bottom, top, right or left, two values can be used, e.g. c("bottom","right").
shinydashboard	Set to TRUE if in a shinydasboard application.

Examples

```
if (interactive()) {

### Uniform color background :

library(shiny)
library(shinyWidgets)

ui <- fluidPage(
  tags$h2("Change shiny app background"),
  setBackgroundColor("ghostwhite")
)

server <- function(input, output, session) {

}

shinyApp(ui, server)

### linear gradient background :

library(shiny)
library(shinyWidgets)

ui <- fluidPage(

  # use a gradient in background
  setBackgroundColor(
    color = c("#F7FBFF", "#2171B5"),
    gradient = "linear",
    direction = "bottom"
  ),

  titlePanel("Hello Shiny!"),
  sidebarLayout(
    sidebarPanel(
      sliderInput("obs",
                  "Number of observations:",
                  min = 0,
                  max = 1000,
                  value = 500)
    ),
    mainPanel(
      plotOutput("distPlot")
    )
```

```
  )
)

server <- function(input, output, session) {
  output$distPlot <- renderPlot({
    hist(rnorm(input$obs))
  })
}

shinyApp(ui, server)

### radial gradient background :

library(shiny)
library(shinyWidgets)

ui <- fluidPage(

  # use a gradient in background
  setBackgroundColor(
    color = c("#F7FBFF", "#2171B5"),
    gradient = "radial",
    direction = c("top", "left")
  ),

  titlePanel("Hello Shiny!"),
  sidebarLayout(
    sidebarPanel(
      sliderInput("obs",
                  "Number of observations:",
                  min = 0,
                  max = 1000,
                  value = 500)
    ),
    mainPanel(
      plotOutput("distPlot")
    )
  )
)

server <- function(input, output, session) {
  output$distPlot <- renderPlot({
    hist(rnorm(input$obs))
  })
}

shinyApp(ui, server)

}
```

setBackgroundImage *Custom background image for your shinyapp*

Description

Allow to change the background image of your shinyapp.

Usage

```
setBackgroundImage(src = NULL, shinydashboard = FALSE)
```

Arguments

src	Url or path to the image, if using local image, the file must be in www/ directory and the path not contain www/.
shinydashboard	Set to TRUE if in a shinydasboard application.

Examples

```
if (interactive()) {

library(shiny)
library(shinyWidgets)

ui <- fluidPage(
  tags$h2("Add a shiny app background image"),
  setBackgroundImage(
    src = "https://www.fillmurray.com/1920/1080"
  )
)

server <- function(input, output, session) {

}

shinyApp(ui, server)

}
```

setShadow *Custom shadows*

Description

Allow to apply a shadow on a given element.

Usage

```
setShadow(id = NULL, class = NULL)
```

Arguments

id	Use this argument if you want to target an individual element.
class	The element to which the shadow should be applied. For example, class is set to box.

Examples

```
if (interactive()) {

 library(shiny)
 library(shinydashboard)
 library(shinydashboardPlus)
 library(shinyWidgets)

 boxTag <- boxPlus(
  title = "Closable box, with label",
  closable = TRUE,
  enable_label = TRUE,
  label_text = 1,
  label_status = "danger",
  status = "warning",
  solidHeader = FALSE,
  collapsible = TRUE,
  p("Box Content")
 )

 shinyApp(
  ui = dashboardPagePlus(
    header = dashboardHeaderPlus(
      enable_rightsidebar = TRUE,
      rightSidebarIcon = "gears"
    ),
    sidebar = dashboardSidebar(),
    body = dashboardBody(

     setShadow(class = "box"),
     setShadow(id = "my-progress"),

     tags$h2("Add shadow to the box class"),
     fluidRow(boxTag, boxTag),
     tags$h2("Add shadow only to the first element using id"),
     tagAppendAttributes(
      verticalProgress(
       value = 10,
       striped = TRUE,
       active = TRUE
      ),
```

```
        id = "my-progress"
      ),
      verticalProgress(
        value = 50,
        active = TRUE,
        status = "warning",
        size = "xs"
      ),
      verticalProgress(
        value = 20,
        status = "danger",
        size = "sm",
        height = "60%"
      )
     ),
     rightsidebar = rightSidebar(),
     title = "DashboardPage"
   ),
   server = function(input, output) { }
  )
}
```

`setSliderColor` *Color editor for sliderInput*

Description

Edit the color of the original shiny's sliderInputs

Usage

```
setSliderColor(color, sliderId)
```

Arguments

`color`	The `color` to apply. This can also be a vector of colors if you want to customize more than 1 slider. Either pass the name of the color such as 'Chartreuse ' and 'Chocolate 'or the HEX notation such as `'#7FFF00'` and `'#D2691E'`.
`sliderId`	The `id` of the customized slider(s). This can be a vector like `c(1,2)`, if you want to modify the 2 first sliders. However, if you only want to modify the second slider, just use the value 2.

Note

See also https://www.w3schools.com/colors/colors_names.asp to have an overview of all colors.

See Also

See `chooseSliderSkin` to update the global skin of your sliders.

Examples

```
if (interactive()) {

library(shiny)
library(shinyWidgets)

ui <- fluidPage(

  # only customize the 2 first sliders and the last one
  # the color of the third one is empty
  setSliderColor(c("DeepPink ", "#FF4500", "", "Teal"), c(1, 2, 4)),
  sliderInput("obs", "My pink slider:",
              min = 0, max = 100, value = 50
  ),
  sliderInput("obs2", "My orange slider:",
              min = 0, max = 100, value = 50
  ),
  sliderInput("obs3", "My basic slider:",
              min = 0, max = 100, value = 50
  ),
  sliderInput("obs3", "My teal slider:",
              min = 0, max = 100, value = 50
  ),
  plotOutput("distPlot")
)

server <- function(input, output) {

  output$distPlot <- renderPlot({
    hist(rnorm(input$obs))
  })
}

shinyApp(ui, server)

}
```

`shinyWidgets` *shinyWidgets: Custom inputs widgets for Shiny.*

Description

The shinyWidgets package provides several custom widgets to extend those available in package shiny

Examples

```
if (interactive()) {
  shinyWidgets::shinyWidgetsGallery()
}
```

shinyWidgetsGallery *Launch the shinyWidget Gallery*

Description

A gallery of widgets available in the package.

Usage

```
shinyWidgetsGallery()
```

Examples

```
if (interactive()) {

 shinyWidgetsGallery()

}
```

show_toast *Show a toast notification*

Description

Show a toast notification

Usage

```
show_toast(
  title,
  text = NULL,
  type = c("default", "success", "error", "info", "warning", "question"),
  timer = 3000,
  timerProgressBar = TRUE,
 position = c("bottom-end", "top", "top-start", "top-end", "center", "center-start",
    "center-end", "bottom", "bottom-start"),
  width = NULL,
  session = shiny::getDefaultReactiveDomain()
)
```

Arguments

title	Title for the toast.
text	Text for the toast.
type	Type of the toast: "default", "success", "error", "info", "warning" or "question".
timer	Auto close timer of the modal. Set in ms (milliseconds).
timerProgressBar	If set to true, the timer will have a progress bar at the bottom of a popup.
position	Modal window position, can be "top", "top-start", "top-end", "center", "center-start", "center-end", "bottom", "bottom-start", or "bottom-end".
width	Modal window width, including paddings.
session	The session object passed to function given to shinyServer.

Value

No value.

See Also

show_alert, ask_confirmation, closeSweetAlert.

Examples

```
library(shiny)
library(shinyWidgets)

ui <- fluidPage(
  tags$h2("Sweet Alert Toast"),
  actionButton(
    inputId = "toast",
    label = "Show default toast"
  ),
  actionButton(
    inputId = "success",
    label = "Show success toast",
    icon = icon("check")
  ),
  actionButton(
    inputId = "error",
    label = "Show error toast",
    icon = icon("remove")
  ),
  actionButton(
    inputId = "warning",
    label = "Show warning toast",
    icon = icon("exclamation-triangle")
  ),
  actionButton(
```

```
    inputId = "info",
    label = "Show info toast",
    icon = icon("info")
  )
)

server <- function(input, output, session) {

  observeEvent(input$toast, {
    show_toast(
      title = "Notification",
      text = "An imortant message"
    )
  })

  observeEvent(input$success, {
    show_toast(
      title = "Bravo",
      text = "Well done!",
      type = "success"
    )
  })

  observeEvent(input$error, {
    show_toast(
      title = "Ooops",
      text = "It's broken",
      type = "error",
      width = "800px",
      position = "bottom"
    )
  })

  observeEvent(input$warning, {
    show_toast(
      title = "Careful!",
      text = "Almost broken",
      type = "warning",
      position = "top-end"
    )
  })

  observeEvent(input$info, {
    show_toast(
      title = "Heads up",
      text = "Just a message",
      type = "info",
      position = "top-end"
    )
  })
}

if (interactive())
```

```
shinyApp(ui, server)
```

`sliderTextInput` *Slider Text Input Widget*

Description

Constructs a slider widget with characters instead of numeric values.

Usage

```
sliderTextInput(
  inputId,
  label,
  choices,
  selected = NULL,
  animate = FALSE,
  grid = FALSE,
  hide_min_max = FALSE,
  from_fixed = FALSE,
  to_fixed = FALSE,
  from_min = NULL,
  from_max = NULL,
  to_min = NULL,
  to_max = NULL,
  force_edges = FALSE,
  width = NULL,
  pre = NULL,
  post = NULL,
  dragRange = TRUE
)
```

Arguments

`inputId`	The `input` slot that will be used to access the value.
`label`	Display label for the control, or `NULL` for no label.
`choices`	Character vector to select a value from.
`selected`	The initially selected value, if length > 1, create a range slider.
`animate`	TRUE to show simple animation controls with default settings, for more details see `sliderInput`.
`grid`	Logical, show or hide ticks marks.
`hide_min_max`	Hides min and max labels.
`from_fixed`	Fix position of left (or single) handle.
`to_fixed`	Fix position of right handle.

from_min	Set minimum limit for left handle.
from_max	Set the maximum limit for left handle.
to_min	Set minimum limit for right handle.
to_max	Set the maximum limit for right handle.
force_edges	Slider will be always inside it's container.
width	The width of the input, e.g. 400px, or 100%.
pre	A prefix string to put in front of the value.
post	A suffix string to put after the value.
dragRange	See the same argument in sliderInput.

Value

The value retrieved server-side is a character vector.

See Also

updateSliderTextInput to update value server-side.

Examples

```
if (interactive()) {

library("shiny")
library("shinyWidgets")

ui <- fluidPage(
  br(),
  sliderTextInput(
    inputId = "mySliderText",
    label = "Month range slider:",
    choices = month.name,
    selected = month.name[c(4, 7)]
  ),
  verbatimTextOutput(outputId = "result")
)

server <- function(input, output, session) {
  output$result <- renderPrint(str(input$mySliderText))
}

shinyApp(ui = ui, server = server)

}
```

spectrumInput *Palette Color Picker with Spectrum Library*

Description

A widget to select a color within palettes, and with more options if needed.

Usage

```
spectrumInput(
  inputId,
  label,
  choices = NULL,
  selected = NULL,
  flat = FALSE,
  options = list(),
  update_on = c("move", "dragstop", "change"),
  width = NULL
)
```

Arguments

inputId	The input slot that will be used to access the value.
label	Display label for the control, or NULL for no label.
choices	List of colors to display in the menu.
selected	The initially selected value.
flat	Display the menu inline.
options	Additional options to pass to spectrum, possible values are described here : https://bgrins.github.io/spectrum/#options.
update_on	When to update value server-side: "move" (default, each time a new color is selected), "dragstop" (when use user stop dragging cursor), "change" (when the input is closed).
width	The width of the input, e.g. 400px, or 100%.

Value

The selected color in Hex format server-side

Examples

```
if (interactive()) {

library("shiny")
library("shinyWidgets")
library("scales")
```

```
ui <- fluidPage(
  tags$h1("Spectrum color picker"),

  br(),

  spectrumInput(
    inputId = "myColor",
    label = "Pick a color:",
    choices = list(
      list('black', 'white', 'blanchedalmond', 'steelblue', 'forestgreen'),
      as.list(brewer_pal(palette = "Blues")(9)),
      as.list(brewer_pal(palette = "Greens")(9)),
      as.list(brewer_pal(palette = "Spectral")(11)),
      as.list(brewer_pal(palette = "Dark2")(8))
    ),
    options = list(`toggle-palette-more-text` = "Show more")
  ),
  verbatimTextOutput(outputId = "res")

)

server <- function(input, output, session) {

  output$res <- renderPrint(input$myColor)

}

shinyApp(ui, server)

}
```

`sweetalert` *Display a Sweet Alert to the user*

Description

Show an alert message to the user to provide some feedback.

Usage

```
sendSweetAlert(
  session,
  title = "Title",
  text = NULL,
  type = NULL,
  btn_labels = "Ok",
  btn_colors = "#3085d6",
  html = FALSE,
  closeOnClickOutside = TRUE,
```

```
  showCloseButton = FALSE,
  width = NULL
)

show_alert(
  title = "Title",
  text = NULL,
  type = NULL,
  btn_labels = "Ok",
  btn_colors = "#3085d6",
  html = FALSE,
  closeOnClickOutside = TRUE,
  showCloseButton = FALSE,
  width = NULL,
  session = shiny::getDefaultReactiveDomain()
)
```

Arguments

session	The session object passed to function given to shinyServer.
title	Title of the alert.
text	Text of the alert.
type	Type of the alert : info, success, warning or error.
btn_labels	Label(s) for button(s), can be of length 2, in which case the alert will have two buttons. Use NA for no buttons.s
btn_colors	Color(s) for the buttons.
html	Does text contains HTML tags ?
closeOnClickOutside	Decide whether the user should be able to dismiss the modal by clicking outside of it, or not.
showCloseButton	Show close button in top right corner of the modal.
width	Width of the modal (in pixel).

```

---

sweetalert-confirmation

Launch a confirmation dialog

Description

Launch a popup to ask the user for confirmation.

Usage

```
confirmSweetAlert(
  session,
  inputId,
  title = NULL,
  text = NULL,
  type = "question",
  btn_labels = c("Cancel", "Confirm"),
  btn_colors = NULL,
  closeOnClickOutside = FALSE,
  showCloseButton = FALSE,
  html = FALSE,
  ...
)

ask_confirmation(
  inputId,
  title = NULL,
  text = NULL,
  type = "question",
  btn_labels = c("Cancel", "Confirm"),
  btn_colors = NULL,
  closeOnClickOutside = FALSE,
  showCloseButton = FALSE,
  html = FALSE,
  ...,
  session = shiny::getDefaultReactiveDomain()
)
```

Arguments

session	The session object passed to function given to shinyServer.
inputId	The input slot that will be used to access the value. If in a Shiny module, it use same logic than inputs : use namespace in UI, not in server.
title	Title of the alert.
text	Text of the alert, can contains HTML tags.
type	Type of the alert : info, success, warning or error.
btn_labels	Labels for buttons, cancel button (FALSE) first then confirm button (TRUE).
btn_colors	Colors for buttons.
closeOnClickOutside	Decide whether the user should be able to dismiss the modal by clicking outside of it, or not.

showCloseButton
: Show close button in top right corner of the modal.

html
: Does `text` contains HTML tags ?

...
: Additional arguments (not used)

switchInput *Bootstrap Switch Input Control*

Description

Create a toggle switch.

Usage

```
switchInput(
  inputId,
  label = NULL,
  value = FALSE,
  onLabel = "ON",
  offLabel = "OFF",
  onStatus = NULL,
  offStatus = NULL,
  size = "default",
  labelWidth = "auto",
  handleWidth = "auto",
  disabled = FALSE,
  inline = FALSE,
  width = NULL
)
```

Arguments

inputId	The input slot that will be used to access the value.
label	Display a text in the center of the switch.
value	Initial value (TRUE or FALSE).
onLabel	Text on the left side of the switch (TRUE).
offLabel	Text on the right side of the switch (FALSE).
onStatus	Color (bootstrap status) of the left side of the switch (TRUE).
offStatus	Color (bootstrap status) of the right side of the switch (FALSE).
size	Size of the buttons ('default', 'mini', 'small', 'normal', 'large').
labelWidth	Width of the center handle in pixels.
handleWidth	Width of the left and right sides in pixels.
disabled	Logical, display the toggle switch in disabled state?.
inline	Logical, display the toggle switch inline?
width	The width of the input : 'auto', 'fit', '100px', '75%'.

Value

A switch control that can be added to a UI definition.

Note

For more information, see the project on Github https://github.com/Bttstrp/bootstrap-switch.

See Also

updateSwitchInput, materialSwitch

Examples

```
## Only run examples in interactive R sessions
if (interactive()) {

# Examples in the gallery :
shinyWidgets::shinyWidgetsGallery()

# Basic usage :
ui <- fluidPage(
  switchInput(inputId = "somevalue"),
  verbatimTextOutput("value")
)
server <- function(input, output) {
  output$value <- renderPrint({ input$somevalue })
}
shinyApp(ui, server)
}
```

`textInputAddon` *Text with Add-on Input Control*

Description

Create text field with add-on.

Usage

```
textInputAddon(
  inputId,
  label,
  value = "",
  placeholder = NULL,
  addon,
  width = NULL
)
```

Arguments

`inputId`	The `input` slot that will be used to access the value.
`label`	Display label for the control, or `NULL` for no label.
`value`	Initial value..
`placeholder`	A character string giving the user a hint as to what can be entered into the control.
`addon`	An icon tag, created by icon.
`width`	The width of the input : 'auto', 'fit', '100px', '75%'

Value

A switch control that can be added to a UI definition.

Examples

```
## Only run examples in interactive R sessions
if (interactive()) {
shinyApp(
  ui = fluidPage(
   textInputAddon(inputId = "id", label = "Label", placeholder = "Username", addon = icon("at")),
    verbatimTextOutput(outputId = "out")
  ),
  server = function(input, output) {
    output$out <- renderPrint({
      input$id
    })
  }
)
```

```
}
```

`textInputIcon` *Create a text input control with icon(s)*

Description

Extend form controls by adding text or icons before, after, or on both sides of a classic `textInput`.

Usage

```
textInputIcon(
  inputId,
  label,
  value = "",
  placeholder = NULL,
  icon = NULL,
  size = NULL,
  width = NULL
)
```

Arguments

`inputId`	The `input` slot that will be used to access the value.
`label`	Display label for the control, or `NULL` for no label.
`value`	Initial value.
`placeholder`	A character string giving the user a hint as to what can be entered into the control. Internet Explorer 8 and 9 do not support this option.
`icon`	An `icon` or a `list`, containing `icons` or text, to be displayed on the right or left of the text input.
`size`	Size of the input, default to `NULL`, can be `"sm"` (small) or `"lg"` (large).
`width`	The width of the input, e.g. `'400px'`, or `'100%'`; see `validateCssUnit()`.

Value

A text input control that can be added to a UI definition.

Examples

```
if (interactive()) {
  library(shiny)
  library(shinyWidgets)

  ui <- fluidPage(
    tags$h2("textInputIcon examples"),
```

```
    fluidRow(
      column(
        width = 6,
        textInputIcon(
          inputId = "ex1",
          label = "With an icon",
          icon = icon("user-circle-o")
        ),
        verbatimTextOutput("res1"),
        textInputIcon(
          inputId = "ex2",
          label = "With an icon (right)",
          icon = list(NULL, icon("user-circle-o"))
        ),
        verbatimTextOutput("res2"),
        textInputIcon(
          inputId = "ex3",
          label = "With text",
          icon = list("https://")
        ),
        verbatimTextOutput("res3"),
        textInputIcon(
          inputId = "ex4",
          label = "Both side",
          icon = list(icon("envelope"), "@mail.com")
        ),
        verbatimTextOutput("res4"),
        textInputIcon(
          inputId = "ex5",
          label = "Sizing",
          icon = list(icon("envelope"), "@mail.com"),
          size = "lg"
        ),
        verbatimTextOutput("res5")
      )
    )
  )

  server <- function(input, output, session) {

    output$res1 <- renderPrint(input$ex1)
    output$res2 <- renderPrint(input$ex2)
    output$res3 <- renderPrint(input$ex3)
    output$res4 <- renderPrint(input$ex4)
    output$res5 <- renderPrint(input$ex5)

  }

  shinyApp(ui, server)
}
```

toggleDropdownButton *Toggle a dropdown menu*

Description

Open or close a dropdown menu server-side.

Usage

```
toggleDropdownButton(inputId, session = getDefaultReactiveDomain())
```

Arguments

inputId	Id for the dropdown to toggle.
session	Standard shiny session.

Examples

```
if (interactive()) {

library("shiny")
library("shinyWidgets")

ui <- fluidPage(
  tags$h2("Toggle Dropdown Button"),
  br(),
  fluidRow(
    column(
      width = 6,
      dropdownButton(
        tags$h3("List of Inputs"),
        selectInput(inputId = 'xcol',
                    label = 'X Variable',
                    choices = names(iris)),
        sliderInput(inputId = 'clusters',
                    label = 'Cluster count',
                    value = 3,
                    min = 1,
                    max = 9),
        actionButton(inputId = "toggle2",
                     label = "Close dropdown"),
        circle = TRUE, status = "danger",
        inputId = "mydropdown",
        icon = icon("gear"), width = "300px"
      )
    ),
    column(
      width = 6,
      actionButton(inputId = "toggle1",
```

```
                    label = "Open dropdown")
    )
  )
)

server <- function(input, output, session) {

  observeEvent(list(input$toggle1, input$toggle2), {
    toggleDropdownButton(inputId = "mydropdown")
  }, ignoreInit = TRUE)

}

shinyApp(ui = ui, server = server)

}
```

`tooltipOptions` *Tooltip options*

Description

List of options for tooltip for a dropdown menu button.

Usage

```
tooltipOptions(placement = "right", title = "Params", html = FALSE)
```

Arguments

`placement`	Placement of tooltip : right, top, bottom, left.
`title`	Text of the tooltip
`html`	Logical, allow HTML tags inside tooltip

`updateAirDateInput` *Change the value of* `airDatepickerInput` *on the client*

Description

Change the value of `airDatepickerInput` on the client

Usage

```
updateAirDateInput(
  session,
  inputId,
  label = NULL,
  value = NULL,
  clear = FALSE,
  options = NULL
)
```

Arguments

session	The session object passed to function given to shinyServer.
inputId	The id of the input object.
label	The label to set for the input object.
value	The value to set for the input object.
clear	Logical, clear all previous selected dates.
options	Options to update, see available ones here: http://t1m0n.name/air-datepicker/docs/.

Examples

```
if (interactive()) {

  demoAirDatepicker("update")

}
```

---

updateAutonumericInput

Update an Autonumeric Input Object

Description

Update an Autonumeric Input Object

Usage

```
updateAutonumericInput(
  session,
  inputId,
  label = NULL,
  value = NULL,
  options = NULL
)
```

Arguments

session	Standard shiny session.
inputId	The id of the input object.
label	The label to set for the input object.
value	The value to set for the input object.
options	List of additional parameters to update, use autonumericInput's arguments.

See Also

Other autonumeric: autonumericInput(), currencyInput(), updateCurrencyInput()

Examples

```
if (interactive()) {
  library(shiny)
  library(shinyWidgets)

  ui <- fluidPage(
    h1("AutonumericInput Update Example"),
    br(),
    autonumericInput(
      inputId = "id1",

          )
        )
      })
    }

    shinyApp(ui, server)
  }
```

`updateAwesomeCheckbox` *Change the value of an awesome checkbox input on the client*

Description

Change the value of an awesome checkbox input on the client

Usage

```
updateAwesomeCheckbox(session, inputId, label = NULL, value = NULL)
```

Arguments

`session`	standard `shiny` session
`inputId`	The id of the input object.

label	The label to set for the input object.
value	The value to set for the input object.

See Also

awesomeCheckbox

Examples

```
if (interactive()) {

library("shiny")
library("shinyWidgets")

ui <- fluidPage(
  awesomeCheckbox(
    inputId = "somevalue",
    label = "My label",
    value = FALSE
  ),

  verbatimTextOutput(outputId = "res"),

  actionButton(inputId = "updatevalue", label = "Toggle value"),
  textInput(inputId = "updatelabel", label = "Update label")
)

      label = input$updatelabel
    )
  }, ignoreInit = TRUE)

}

shinyApp(ui = ui, server = server)
```

```
}
```

`updateAwesomeCheckboxGroup` *Change the value of a* `awesomeCheckboxGroup` *input on the client*

Description

Change the value of a `awesomeCheckboxGroup` input on the client

Usage

```
updateAwesomeCheckboxGroup(
  session,
  inputId,
  label = NULL,
  choices = NULL,
  selected = NULL,
  inline = FALSE,
  status = "primary"
)
```

Arguments

`session`	The session object passed to function given to shinyServer.
`inputId`	The id of the input object.
`label`	Input label.
`choices`	List of values to show checkboxes for.
`selected`	The values that should be initially selected, if any.
`inline`	If TRUE, render the choices inline (i.e. horizontally)
`status`	Color of the buttons.

  }, ignoreInit = TRUE)

}

shinyApp(ui = ui, server = server)

}
```

`updateAwesomeRadio` *Change the value of a radio input on the client*

Description

Change the value of a radio input on the client

Usage

```
updateAwesomeRadio(
  session,
  inputId,
  label = NULL,
```

```
  choices = NULL,
  selected = NULL,
  inline = FALSE,
  status = "primary",
  checkbox = FALSE
)
```

Arguments

session	The session object passed to function given to shinyServer.
inputId	The id of the input object.
label	Input label.
choices	List of values to select from (if elements of the list are named then that name rather than the value is displayed to the user)
selected	The initially selected value
inline	If TRUE, render the choices inline (i.e. horizontally)
status	Color of the buttons
checkbox	Checkbox style

```

---

updateCheckboxGroupButtons *Change the value of a checkboxes group buttons input on the client*

Description

Change the value of a radio group buttons input on the client

Usage

```
updateCheckboxGroupButtons(
  session,
  inputId,
  label = NULL,
  choices = NULL,
  selected = NULL,
  status = "default",
  size = "normal",
  checkIcon = list(),
  choiceNames = NULL,
  choiceValues = NULL,
  disabled = FALSE,
  disabledChoices = NULL
)
```

Arguments

session	The session object passed to function given to shinyServer.
inputId	The id of the input object.
label	The label to set.
choices	The new choices for the input.
selected	The values selected.
status	Status, only used if choices is not NULL.
size	Size, only used if choices is not NULL.
checkIcon	Icon, only used if choices is not NULL.
choiceNames, choiceValues	List of names and values, an alternative to choices.
disabled	Logical, disable or enable buttons, if TRUE users won't be able to select a value.
disabledChoices	Vector of specific choices to disable.

`updateCurrencyInput` *Update a Formatted Numeric Input Widget*

Description

Update a Formatted Numeric Input Widget

Usage

```
updateCurrencyInput(
  session,
  inputId,
  label = NULL,
  value = NULL,
  format = NULL
)

updateFormatNumericInput(
  session,
  inputId,
  label = NULL,
  value = NULL,
  format = NULL
)
```

Arguments

`session`	Standard shiny `session`.
`inputId`	The id of the input object.

label	The label to set for the input object.
value	The value to set for the input object.
format	The format to change the input object to.

updateKnobInput *Change the value of a knob input on the client*

Description

Change the value of a knob input on the client

Usage

```
updateKnobInput(session, inputId, label = NULL, value = NULL, options = NULL)
```

Arguments

session	Standard shiny session.
inputId	The id of the input object.
label	The label to set for the input object.
value	The value to set for the input object.
options	List of additional parameters to update, use knobInput's arguments.

Examples

```
if (interactive()) {

library("shiny")
library("shinyWidgets")

ui <- fluidPage(
  tags$h1("knob update examples"),
  br(),

  fluidRow(

`updateMaterialSwitch` *Change the value of a materialSwitch input on the client*

Description

Change the value of a materialSwitch input on the client

Usage

```
updateMaterialSwitch(session, inputId, value = NULL)
```

Arguments

session	The session object passed to function given to shinyServer.
inputId	The id of the input object.
value	The value to set for the input object.

See Also

materialSwitch

---

updateMultiInput *Change the value of a multi input on the client*

Description

Change the value of a multi input on the client

Usage

```
updateMultiInput(
  session,
  inputId,
  label = NULL,
  selected = NULL,
  choices = NULL
)
```

Arguments

session	The session object passed to function given to shinyServer.
inputId	The id of the input object.
label	The label to set.
selected	The values selected. To select none, use `character(0)`.
choices	The new choices for the input.

Note

Thanks to Ian Fellows for this one !

}

shinyApp(ui, server)
```

```
}
```

`updateNoUiSliderInput` *Change the value of a no ui slider input on the client*

Description

Change the value of a no ui slider input on the client

Usage

```
updateNoUiSliderInput(
  session,
  inputId,
  value = NULL,
  range = NULL,
  disable = FALSE
)
```

Arguments

`session`	The `session` object passed to function given to `shinyServer`.
`inputId`	The id of the input object.
`value`	The new value.
`range`	The new range, must be of length 2 with `c(min,max)`.
`disable`	logical, disable or not the slider, if disabled the user can no longer modify the slider value

Examples

```
if (interactive()) {

 demoNoUiSlider("update")

}
```

`updateNumericInputIcon` *Change the value of a numeric input icon on the client*

Description

Change the value of a numeric input icon on the client

Usage

```
updateNumericInputIcon(
  session,
  inputId,
  label = NULL,
  value = NULL,
  min = NULL,
  max = NULL,
  step = NULL,
  icon = NULL
)
```

Arguments

`session`	The `session` object passed to function given to `shinyServer`.
`inputId`	The id of the input object.
`label`	The label to set for the input object.
`value`	The value to set for the input object.
`min`	Minimum value.
`max`	Maximum value.
`step`	Step size.
`icon`	Icon to update, note that you can update icon only if initialized in `numericInputIcon`.

Value

No value.

Examples

```
library(shiny)
library(shinyWidgets)

ui <- fluidPage(
  numericInputIcon(
    inputId = "id",
    label = "With an icon",
    value = 10,
```

```
    icon = icon("percent")
  ),
  actionButton("updateValue", "Update value"),
  actionButton("updateIcon", "Update icon"),
  verbatimTextOutput("value")
)

server <- function(input, output, session) {

  output$value <- renderPrint(input$id)

  observeEvent(input$updateValue, {
    updateNumericInputIcon(
      session = session,
      inputId = "id",
      value = sample.int(100, 1)
    )
  })

  observeEvent(input$updateIcon, {
    i <- sample(c("home", "gears", "dollar", "globe", "sliders"), 1)
    updateNumericInputIcon(
      session = session,
      inputId = "id",
      icon = icon(i)
    )
  })

}

if (interactive())
  shinyApp(ui, server)
```

`updateNumericRangeInput` *Change the value of a numeric range input*

Description

Change the value of a numeric range input

Usage

```
updateNumericRangeInput(session, inputId, label = NULL, value = NULL)
```

Arguments

`session`	The session object passed to function given to shinyServer.
`inputId`	The `input` slot that will be used to access the value.

label	Display label for the control, or NULL for no label.
value	The initial value(s) for the range. A numeric vector of length one will be duplicated to represent the minimum and maximum of the range; a numeric vector of two or more will have its minimum and maximum set the minimum and maximum of the range.

---

updatePickerInput *Change the value of a select picker input on the client*

Description

Change the value of a picker input on the client

Usage

```
updatePickerInput(
  session,
  inputId,
  label = NULL,
  selected = NULL,
  choices = NULL,
  choicesOpt = NULL
)
```

Arguments

session	The session object passed to function given to shinyServer.
inputId	The id of the input object.
label	Display a text in the center of the switch.
selected	The new selected value (or multiple values if multiple = TRUE). To reset selected value, in case of multiple picker, use character(0).
choices	List of values to select from. If elements of the list are named then that name rather than the value is displayed to the user.
choicesOpt	Options for choices in the dropdown menu

updatePrettyCheckbox *Change the value of a pretty checkbox on the client*

Description

Change the value of a pretty checkbox on the client

Usage

```
updatePrettyCheckbox(session, inputId, label = NULL, value = NULL)
```

Arguments

session	The session object passed to function given to shinyServer.
inputId	The id of the input object.
label	The label to set for the input object.
value	The value to set for the input object.

Examples

```
library(shiny)
library(shinyWidgets)

ui <- fluidPage(
  tags$h1("Pretty checkbox update value"),
  br(),

  prettyCheckbox(
    inputId = "checkbox1",
    label = "Update me!",
    shape = "curve",
    thick = TRUE,
    outline = TRUE
  ),
```

```
  verbatimTextOutput(outputId = "res1"),
  radioButtons(
    inputId = "update",
    label = "Value to set:",
    choices = c("FALSE", "TRUE")
  )

)

server <- function(input, output, session) {

      value = as.logical(input$update)
    )
  })

}

if (interactive())
  shinyApp(ui, server)
```

---

updatePrettyCheckboxGroup *Change the value of a pretty checkbox on the client*

Description

Change the value of a pretty checkbox on the client

Usage

```
updatePrettyCheckboxGroup(
  session,
  inputId,
  label = NULL,
  choices = NULL,
  selected = NULL,
  inline = FALSE,
  choiceNames = NULL,
  choiceValues = NULL,
  prettyOptions = list()
)
```

Arguments

session	The session object passed to function given to shinyServer.
inputId	The id of the input object.
label	The label to set for the input object.
choices	The choices to set for the input object, updating choices will reset parameters like status, shape, ... on the checkboxes, you can re-specify (or change them) in argument prettyOptions.
selected	The value to set for the input object.
inline	If TRUE, render the choices inline (i.e. horizontally).
choiceNames	The choices names to set for the input object.
choiceValues	The choices values to set for the input object.
prettyOptions	Arguments passed to prettyCheckboxGroup for styling checkboxes. This can be needed if you update choices.

Examples

```
library(shiny)
library(shinyWidgets)

ui <- fluidPage(
  tags$h1("Update pretty checkbox group"),
  br(),

  fluidRow(
    column(
      width = 6,

```

`updatePrettyRadioButtons` *Change the value pretty radio buttons on the client*

Description

Change the value pretty radio buttons on the client

Usage

```
updatePrettyRadioButtons(
  session,
  inputId,
  label = NULL,
  choices = NULL,
  selected = NULL,
  inline = FALSE,
  choiceNames = NULL,
  choiceValues = NULL,
  prettyOptions = list()
)
```

Arguments

session	The session object passed to function given to shinyServer.
inputId	The id of the input object.
label	The label to set for the input object.
choices	The choices to set for the input object, updating choices will reset parameters like status, shape, ... on the radio buttons, you can re-specify (or change them) in argument prettyOptions.
selected	The value to set for the input object.
inline	If TRUE, render the choices inline (i.e. horizontally).
choiceNames	The choices names to set for the input object.
choiceValues	The choices values to set for the input object.
prettyOptions	Arguments passed to prettyRadioButtons for styling radio buttons. This can be needed if you update choices.

Examples

```
library(shiny)
library(shinyWidgets)

ui <- fluidPage(
  tags$h1("Update pretty radio buttons"),
  br(),

  fluidRow(
    column(
      width = 6,
      prettyRadioButtons(
        inputId = "radio1",
        label = "Update my value!",
        choices = month.name[1:4],
        status = "danger",
        icon = icon("remove")
      ),
```

```
      verbatimTextOutput(outputId = "res1"),
      br(),
      radioButtons(
        inputId = "update1", label = "Update value :",
        choices = month.name[1:4], inline = TRUE
      )
    ),
    column(
      width = 6,
      prettyRadioButtons(
        inputId = "radio2",
        label = "Update my choices!",
        thick = TRUE,
        choices = month.name[1:4],
        animation = "pulse",
        status = "info"
      ),
      verbatimTextOutput(outputId = "res2"),
      br(),
      actionButton(inputId = "update2", label = "Update choices !")
    )
  )

)

server <- function(input, output, session) {

  output$res1 <- renderPrint(input$radio1)

  observeEvent(input$update1, {
    updatePrettyRadioButtons(
      session = session,

```

updatePrettySwitch *Change the value of a pretty switch on the client*

Description

Change the value of a pretty switch on the client

Usage

```
updatePrettySwitch(session, inputId, label = NULL, value = NULL)
```

Arguments

session	The session object passed to function given to shinyServer.
inputId	The id of the input object.
label	The label to set for the input object.
value	The value to set for the input object.

Examples

```
library(shiny)
library(shinyWidgets)

ui <- fluidPage(
  tags$h1("Pretty switch update value"),
  br(),

  prettySwitch(inputId = "switch1", label = "Update me !"),
  verbatimTextOutput(outputId = "res1"),
  radioButtons(
    inputId = "update",
    label = "Value to set:",
    choices = c("FALSE", "TRUE")
  )

)

server <- function(input, output, session) {

  output$res1 <- renderPrint(input$switch1)

  observeEvent(input$update, {
    updatePrettySwitch(
      session = session,
      inputId = "switch1",
      value = as.logical(input$update)
    )
  })
```

```
}

if (interactive())
  shinyApp(ui, server)
```

---

updatePrettyToggle *Change the value of a pretty toggle on the client*

Description

Change the value of a pretty toggle on the client

Usage

```
updatePrettyToggle(session, inputId, label = NULL, value = NULL)
```

Arguments

session	The session object passed to function given to shinyServer.
inputId	The id of the input object.
label	The label to set for the input object.
value	The value to set for the input object.

Examples

```
library(shiny)
library(shinyWidgets)

ui <- fluidPage(
  tags$h1("Pretty toggle update value"),
  br(),

  prettyToggle(
    inputId = "toggle1",
    label_on = "Checked!",
    label_off = "Unchecked..."
  ),
  verbatimTextOutput(outputId = "res1"),
  radioButtons(
    inputId = "update",
    label = "Value to set:",
    choices = c("FALSE", "TRUE")
  )

)

server <- function(input, output, session) {

  output$res1 <- renderPrint(input$toggle1)
```

```
  observeEvent(input$update, {
    updatePrettyToggle(
      session = session,
      inputId = "toggle1",
      value = as.logical(input$update)
    )
  })

}

if (interactive())
  shinyApp(ui, server)
```

`updateRadioGroupButtons` *Change the value of a radio group buttons input on the client*

Description

Change the value of a radio group buttons input on the client

Usage

```
updateRadioGroupButtons(
  session,
  inputId,
  label = NULL,
  choices = NULL,
  selected = NULL,
  status = "default",
  size = "normal",
  checkIcon = list(),
  choiceNames = NULL,
  choiceValues = NULL,
  disabled = FALSE,
  disabledChoices = NULL
)
```

Arguments

`session`	The session object passed to function given to shinyServer.
`inputId`	The id of the input object.
`label`	The label to set.
`choices`	The new choices for the input.
`selected`	The value selected.
`status`	Status, only used if choices is not NULL.

size	Size, only used if choices is not NULL.
checkIcon	Icon, only used if choices is not NULL.
choiceNames, choiceValues	List of names and values, an alternative to choices.
disabled	Logical, disable or enable buttons, if TRUE users won't be able to select a value.
disabledChoices	Vector of specific choices to disable.

Examples

```
if (interactive()) {

library("shiny")
library("shinyWidgets")

ui <- fluidPage(
  radioGroupButtons(
    inputId = "somevalue",
    choices = c("A", "B", "C"),
    label = "My label"
  ),

  verbatimTextOutput(outputId = "res"),

  actionButton(inputId = "updatechoices", label = "Random choices"),
  pickerInput(
    inputId = "updateselected", label = "Update selected:",
    choices = c("A", "B", "C"), multiple = FALSE
  ),
  textInput(inputId = "updatelabel", label = "Update label")
)

server <- function(input, output, session) {

  output$res <- renderPrint({
    input$somevalue
  })

  observeEvent(input$updatechoices, {
    newchoices <- sample(letters, sample(2:6))
    updateRadioGroupButtons(
      session = session, inputId = "somevalue",
      choices = newchoices
    )
    updatePickerInput(
      session = session, inputId = "updateselected",
      choices = newchoices
    )
  })

  observeEvent(input$updateselected, {
```

```
    updateRadioGroupButtons(
      session = session, inputId = "somevalue",
      selected = input$updateselected
    )
  }, ignoreNULL = TRUE, ignoreInit = TRUE)

  observeEvent(input$updatelabel, {
    updateRadioGroupButtons(
      session = session, inputId = "somevalue",
      label = input$updatelabel
    )
  }, ignoreInit = TRUE)

}

shinyApp(ui = ui, server = server)

}
```

`updateSearchInput` *Change the value of a search input on the client*

Description

Change the value of a search input on the client

Usage

```
updateSearchInput(
  session,
  inputId,
  label = NULL,
  value = NULL,
  placeholder = NULL,
  trigger = FALSE
)
```

Arguments

`session`	The `session` object passed to function given to `shinyServer`.
`inputId`	The id of the input object.
`label`	The label to set for the input object.
`value`	The value to set for the input object.
`placeholder`	The placeholder to set for the input object.
`trigger`	Logical, update value server-side as well.

Note

By default, only UI value is updated, use `trigger = TRUE` to update both UI and Server value.

Examples

```
if (interactive()) {

library(shiny)
library(shinyWidgets)

ui <- fluidPage(
  tags$h2("Update searchinput"),
  searchInput(
    inputId = "search", label = "Enter your text",
    placeholder = "A placeholder",
    btnSearch = icon("search"),
    btnReset = icon("remove"),
    width = "450px"
  ),
  br(),
  verbatimTextOutput(outputId = "res"),
  br(),
  textInput(
    inputId = "update_search",
    label = "Update search"
  ),
  checkboxInput(
    inputId = "trigger_search",
    label = "Trigger update search",
    value = TRUE
  )
)

server <- function(input, output, session) {

  output$res <- renderPrint({
    input$search
  })

  observeEvent(input$update_search, {
    updateSearchInput(
      session = session,
      inputId = "search",
      value = input$update_search,
      trigger = input$trigger_search
    )
  }, ignoreInit = TRUE)
}

shinyApp(ui, server)

}
```

updateSliderTextInput *Change the value of a slider text input on the client*

Description

Change the value of a slider text input on the client

Usage

```
updateSliderTextInput(
  session,
  inputId,
  label = NULL,
  selected = NULL,
  choices = NULL,
  from_fixed = NULL,
  to_fixed = NULL
)
```

Arguments

session	The session object passed to function given to shinyServer.
inputId	The id of the input object.
label	The label to set.
selected	The values selected.
choices	The new choices for the input.
from_fixed	Fix the left handle (or single handle).
to_fixed	Fix the right handle.

}
```

`updateSpectrumInput` *Change the value of a spectrum input on the client*

Description

Change the value of a spectrum input on the client

Usage

```
updateSpectrumInput(session, inputId, selected)
```

Arguments

`session`	The session object passed to function given to shinyServer.
`inputId`	The id of the input object.
`selected`	The value to select.

Examples

```
if (interactive()) {

library("shiny")
library("shinyWidgets")

ui <- fluidPage(
  tags$h1("Spectrum color picker"),

  br(),

  spectrumInput(
    inputId = "myColor",
    label = "Pick a color:",

}
```

---

updateSwitchInput *Change the value of a switch input on the client*

Description

Change the value of a switch input on the client

Usage

```
updateSwitchInput(
  session,
  inputId,
  value = NULL,
  label = NULL,
  onLabel = NULL,
  offLabel = NULL,
  onStatus = NULL,
  offStatus = NULL,
  disabled = NULL
)
```

Arguments

session	The session object passed to function given to shinyServer.
inputId	The id of the input object.
value	The value to set for the input object.
label	The label to set for the input object.
onLabel	The onLabel to set for the input object.
offLabel	The offLabel to set for the input object.
onStatus	The onStatus to set for the input object.
offStatus	The offStatus to set for the input object.
disabled	Logical, disable state.

`updateTextInputIcon` *Change the value of a text input icon on the client*

Description

Change the value of a text input icon on the client

Usage

```
updateTextInputIcon(
  session,
  inputId,
  label = NULL,
  value = NULL,
  placeholder = NULL,
  icon = NULL
)
```

Arguments

`session`	The `session` object passed to function given to `shinyServer`.
`inputId`	The id of the input object.
`label`	The label to set for the input object.
`value`	The value to set for the input object.
`placeholder`	The placeholder to set for the input object.
`icon`	Icon to update, note that you can update icon only if initialized in `textInputIcon`.

Value

No value.

Examples

```
library(shiny)
library(shinyWidgets)

ui <- fluidPage(
  textInputIcon(
    inputId = "id",
    label = "With an icon",
    icon = icon("user-circle-o")

      icon = icon(i)
    )
  })

}

if (interactive())
  shinyApp(ui, server)
```

---

updateVerticalTabsetPanel

Update selected vertical tab

Description

Update selected vertical tab

Usage

```
updateVerticalTabsetPanel(session, inputId, selected = NULL)
```

Arguments

session	The session object passed to function given to shinyServer.
inputId	The id of the verticalTabsetPanel object.
selected	The name of the tab to make active.

See Also

verticalTabsetPanel

Examples

```
if (interactive()) {

library(shiny)
library(shinyWidgets)

useBs4Dash *Use 'bs4Dash' in 'shiny'*

Description

Allow to use functions from 'bs4Dash' into a classic 'shiny' app, specifically `bs4ValueBox`, `bs4InfoBox` and `bs4Card`.

Usage

```
useBs4Dash(old_school = FALSE)
```

Arguments

`old_school`	FALSE by default. Experimental.

Examples

```
if (interactive()) {

library(shiny)
library(bs4Dash)
library(shinyWidgets)
```

```
ui <- fluidPage(
  h1("Import bs4Dash elements inside shiny!", align = "center"),
  h5("Don't need any sidebar, navbar, ...", align = "center"),
  h5("Only focus on basic elements for a pure interface", align = "center"),

  # use this in non dashboard app
  setBackgroundColor(color = "ghostwhite"),
  useBs4Dash(old_school = FALSE),

  # infoBoxes
  fluidRow(
    bs4InfoBox(
      title = "Messages",
      value = 1410,
      icon = "envelope"
      ),

`useSweetAlert` *Load Sweet Alert dependencies*

Description

This function isn't necessary for `sendSweetAlert`, `confirmSweetAlert`, `inputSweetAlert` (except if you want to use a theme other than the default one), but is still needed for `progressSweetAlert`.

Usage

```
useSweetAlert(
```

```
  theme = c("sweetalert2", "minimal", "dark", "bootstrap-4", "material-ui", "bulma",
    "borderless"),
  ie = FALSE
)
```

Arguments

theme	Theme to modify alerts appearance.
ie	Add a polyfill to work in Internet Explorer.

See Also

sendSweetAlert, confirmSweetAlert, inputSweetAlert, closeSweetAlert.

Examples

```
if (interactive()) {

  library(shiny)
  library(shinyWidgets)

  ui <- fluidPage(

    useSweetAlert("borderless", ie = TRUE),

    tags$h2("Sweet Alert examples (with custom theme)"),

        })

      }
    )
  }
```

`vertical-tab` *Vertical tab panel*

Description

Vertical tab panel

Usage

```
verticalTabsetPanel(
  ...,
  selected = NULL,
  id = NULL,
  color = "#112446",
  contentWidth = 9,
  menuSide = "left"
)

verticalTabPanel(title, ..., value = title, icon = NULL, box_height = "160px")
```

Arguments

`...`	For `verticalTabsetPanel`, `verticalTabPanel` to include, and for the later, UI elements.
`selected`	The `value` (or, if none was supplied, the `title`) of the tab that should be selected by default. If `NULL`, the first tab will be selected.
`id`	If provided, you can use `input$id` in your server logic to determine which of the current tabs is active. The value will correspond to the `value` argument that is passed to `verticalTabPanel`.
`color`	Color for the tab panels.
`contentWidth`	Width of the content panel (must be between 1 and 12), menu width will be `12 -contentWidth`.

menuSide	Side for the menu: right or left.
title	Display title for tab.
value	Not used yet.
icon	Optional icon to appear on the tab.
box_height	Height for the title box.

See Also

updateVerticalTabsetPanel for updating selected tabs.

Examples

```
if (interactive()) {

library(shiny)
library(shinyWidgets)

ui <- fluidPage(
  fluidRow(
    column(
      width = 10, offset = 1,
      tags$h2("Vertical tab panel example"),
      verticalTabsetPanel(
        verticalTabPanel(
          title = "Title 1", icon = icon("home", "fa-2x"),
          "Content panel 1"
        ),
        verticalTabPanel(
          title = "Title 2", icon = icon("map", "fa-2x"),
          "Content panel 2"
        ),
        verticalTabPanel(
          title = "Title 3", icon = icon("rocket", "fa-2x"),
          "Content panel 3"
        )
      )
    )
  )
)

server <- function(input, output, session) {

}

shinyApp(ui, server)

}
```

wNumbFormat *Format numbers in noUiSliderInput*

Description

Format numbers in noUiSliderInput

Usage

```
wNumbFormat(
  decimals = NULL,
  mark = NULL,
  thousand = NULL,
  prefix = NULL,
  suffix = NULL,
  negative = NULL
)
```

Arguments

decimals	The number of decimals to include in the result. Limited to 7.
mark	The decimal separator. Defaults to '.' if thousand isn't already set to '.'.
thousand	Separator for large numbers. For example: ' ' would result in a formatted number of 1 000 000.
prefix	A string to prepend to the number. Use cases include prefixing with money symbols such as '$' or the euro sign.
suffix	A number to append to a number. For example: ',-'.
negative	The prefix for negative values. Defaults to '-'.

Value

a named list.

Note

Performed via wNumb JavaScript library : https://refreshless.com/wnumb/.

Examples

```
if (interactive()) {

library( shiny )
library( shinyWidgets )

ui <- fluidPage(
  tags$h3("Format numbers"),
  tags$br(),
```

```
  noUiSliderInput(
    inputId = "form1",
    min = 0, max = 10000,
    value = 800,
    format = wNumbFormat(decimals = 3,
                         thousand = ".",
                         suffix = " (US $)")
  ),
  verbatimTextOutput(outputId = "res1"),

  tags$br(),

  noUiSliderInput(
    inputId = "form2",
    min = 1988, max = 2018,
    value = 1988,
    format = wNumbFormat(decimals = 0,
                         thousand = "",
                         prefix = "Year: ")
  ),
  verbatimTextOutput(outputId = "res2"),

  tags$br()

)

server <- function(input, output, session) {

  output$res1 <- renderPrint(input$form1)
  output$res2 <- renderPrint(input$form2)

}

shinyApp(ui, server)

}
```
